

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Red
- Wrist Deviation: Red
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Elbows/Forearms, Wrists/Hands, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Correct Elbow Angle: Adjust your sitting position so that your elbows are bent at approximately 90–100°. This reduces strain on your forearms and shoulders, aligning with ISO 9241-5 recommendations.
- Neutral Wrist Position: Keep your wrists straight and avoid bending them upwards or sideways while typing or using the mouse. Your hands should be in line with your forearms.
- Reduce Pelvic Tilt: Sit with your pelvis in a neutral position—avoid slouching or excessive forward/backward tilt. Use a chair with lumbar support to help maintain this posture.
- Raise Monitor Height: Adjust your monitor so the top of the screen is at or just below eye level. This will help you maintain a neutral neck position and reduce upper back and neck strain.

Final Advice

Your assessment shows significant ergonomic risks, especially for your upper back, wrists, and elbows. Immediate workstation adjustments and posture corrections are strongly recommended. Due to your high pain intensity and symptoms lasting over 6 weeks, please consult a healthcare professional if pain persists or worsens.
