

POSTURA

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

Pain & Risk Summary

Average Pain Level: 7

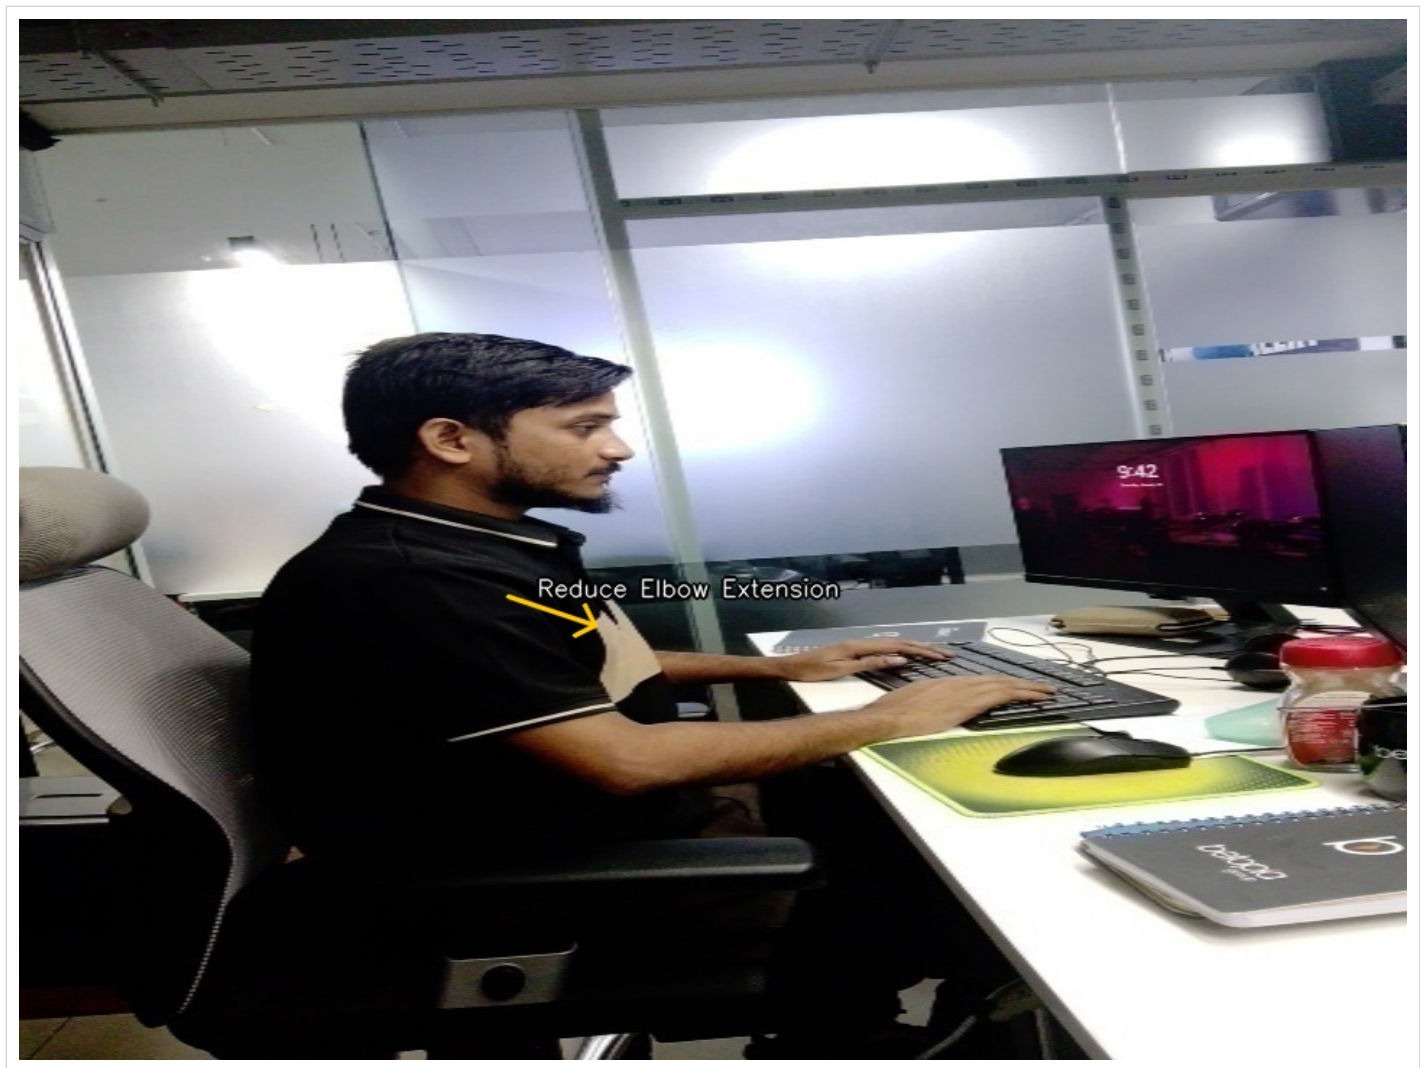

Main Pain Region(s): Neck, Elbows/Forearms, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Correct Elbow Angle: Adjust your chair and desk height so your elbows are bent between 90° and 100°, with forearms parallel to the floor and wrists straight. Avoid extending elbows beyond this range to reduce upper back and shoulder strain.
- Neutral Pelvic Position: Sit with your pelvis in a neutral position—avoid tilting forward or backward. Ensure your hips are level with or slightly higher than your knees, and use lumbar support if needed.
- Relax Shoulders: Lower your shoulders and keep them relaxed, not elevated. Adjust armrests or desk height so your shoulders remain in a neutral, comfortable position.
- Raise Monitor Height: Elevate your monitor so the top of the screen is at or just below your eye level. This will reduce neck flexion and upper back strain.
- Adjust Chair Height: Set your chair height so your feet are flat on the floor and your thighs are parallel to the ground. This supports a neutral pelvic tilt and reduces lower back stress.

Final Advice

Your workstation setup and posture are causing significant upper back and lower back strain, with high pain intensity reported. Prioritize correcting elbow angle, pelvic tilt, and monitor height. Begin recommended exercises and consider equipment upgrades as soon as possible. If pain or tingling worsens, consult a healthcare professional.
