

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

Pain & Risk Summary

Average Pain Level: 7

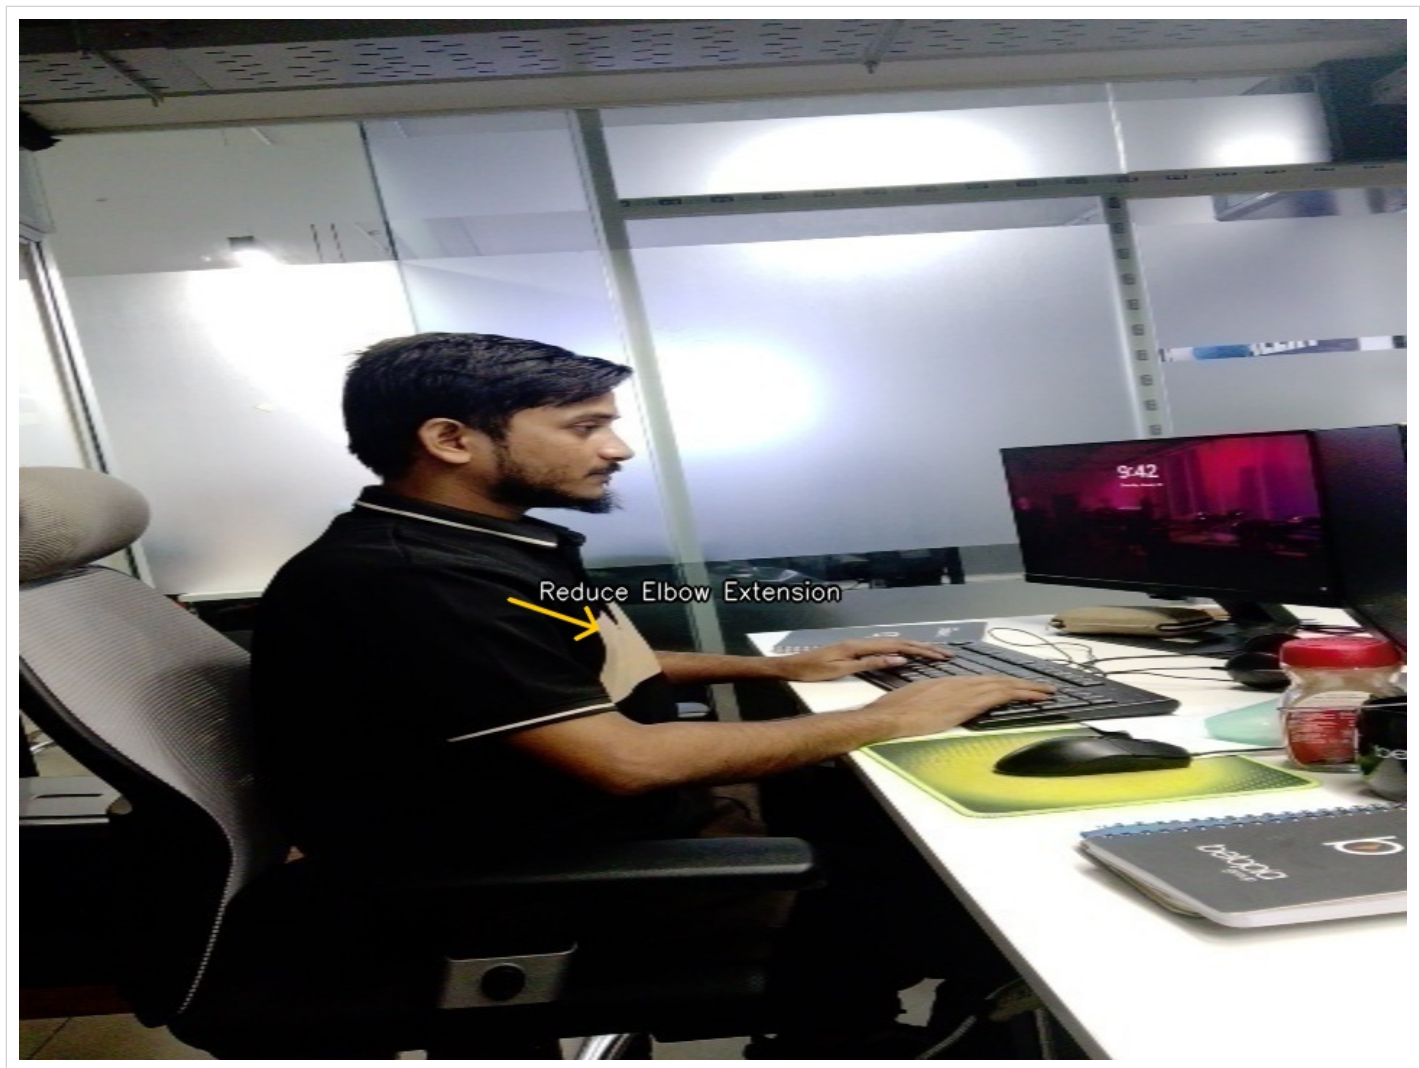

Main Pain Region(s): Neck, Elbows/Forearms, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Correct Elbow Angle: Adjust your sitting position so your elbows are bent between 90° and 110°, keeping your forearms parallel to the floor and close to your body. Avoid extending your arms forward or outward.
- Neutral Pelvic Position: Sit with your hips fully back in the chair and your pelvis in a neutral position. Use a lumbar support cushion if needed to maintain the natural curve of your lower back.
- Relax Shoulder Elevation: Lower your shoulders and keep them relaxed, not hunched. Adjust your chair or armrests so your shoulders remain level and your arms are supported without lifting.
- Raise Monitor Height: Elevate your monitor so the top edge is at or just below eye level. This prevents neck flexion and upper back strain.
- Adjust Armrest Height: Set your chair's armrests so your elbows rest comfortably at a 90°–110° angle, supporting your forearms and reducing shoulder elevation.

Final Advice

Your assessment shows high ergonomic risk, especially for your upper back and lower back due to poor monitor height, pelvic tilt, and elbow angle. Prioritize adjusting your monitor, chair, and armrests, and consider the recommended equipment. If pain persists or worsens, consult a healthcare professional.
