

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Elbows/Forearms, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Correct Elbow Angle: Adjust your chair and keyboard position so your elbows are bent at 90–100°, keeping your forearms parallel to the floor. This reduces strain on your upper back and shoulders.
- Neutral Pelvic Position: Sit with your hips fully back in the chair and ensure your pelvis is not tilted forward or backward. Use a lumbar support if needed to maintain a neutral spine.
- Reduce Shoulder Elevation: Relax your shoulders and keep them low, not hunched. Adjust armrests so your shoulders remain relaxed while typing.
- Raise Monitor Height: Elevate your monitor so the top of the screen is at or just below eye level. This will help keep your neck in a neutral position and reduce upper back and neck strain.
- Optimize Armrest Height: Adjust your chair's armrests so your forearms rest lightly with elbows at 90–100°, supporting your shoulders and reducing elevation.

Final Advice

Your assessment shows significant ergonomic risks, especially for your upper back and lower back. Prioritize correcting monitor height, elbow angle, and pelvic posture. Use recommended equipment and perform the exercises regularly. If pain persists or worsens, consult a healthcare professional.
