

POSTURA

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Green
- Elbow Angle: Red
- Wrist Deviation: Red
- Pelvic Tilt: Yellow

Workstation Analysis

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Elbows/Forearms, Wrists/Hands (VAS 8)

Posture & Ergonomic Corrections

- Reduce Neck Flexion: Sit upright and adjust your gaze so your neck remains neutral, minimizing forward bending. Your chin should be parallel to the floor, and your ears aligned with your shoulders.
- Correct Elbow Angle: Position your elbows so they are bent at approximately 90–100°, close to your body. Avoid extending your arms outward or locking them straight.
- Neutral Wrist Alignment: Keep your wrists straight and in line with your forearms while typing or using the mouse. Avoid bending your wrists up, down, or to the sides.
- Pelvic Neutrality: Sit with your pelvis in a neutral position, avoiding excessive forward or backward tilt. Your hips should be level with or slightly higher than your knees.
- Raise Laptop Screen: Elevate your laptop screen using a monitor riser or stack of sturdy books so the top of the screen is at or just below eye level. This reduces neck flexion.
- Use External Keyboard and Mouse: Connect an external keyboard and mouse to your laptop. Place them at elbow height and close to your body to maintain neutral elbow and wrist positions.
- Adjust Chair Height: Set your chair height so your feet are flat on the floor and your knees are at or slightly below hip level. This helps maintain pelvic neutrality.

Final Advice

Your workstation setup is causing significant strain, especially to your upper back and wrists. Prioritize raising your screen and using external input devices. Perform recommended exercises regularly and consider equipment upgrades to reduce pain and prevent further injury. If pain persists or worsens, consult a healthcare professional.
