

POSTURA

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Green
- Elbow Angle: Red
- Wrist Deviation: Red
- Pelvic Tilt: Yellow

Workstation Analysis

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Elbows/Forearms, Wrists/Hands (VAS 8)

Posture & Ergonomic Corrections

- Reduce Neck Flexion: Sit upright with your head aligned over your shoulders. Avoid bending your neck forward; instead, look straight ahead at your screen to maintain a neutral neck position.
- Correct Elbow Angle: Adjust your arm position so your elbows are bent at approximately 90–100°. Keep your forearms parallel to the floor and close to your body.
- Neutral Wrist Alignment: Keep your wrists straight and avoid bending them upwards, downwards, or sideways while typing or using the mouse. Your hands should be in line with your forearms.
- Pelvic Neutrality: Sit with your hips level and your pelvis in a neutral position. Avoid slouching or tilting your pelvis forward or backward.
- Raise Monitor Height: Elevate your laptop screen or use an external monitor so the top of the screen is at or just below eye level. This reduces neck flexion.
- Use External Keyboard and Mouse: Connect an external keyboard and mouse to your laptop to allow your elbows to rest at a comfortable 90–100° angle and keep wrists straight.
- Adjust Chair Height and Support: Set your chair height so your feet are flat on the floor and your knees are at hip level. Use a lumbar cushion if needed to support your lower back and maintain pelvic neutrality.

Final Advice

Your workstation setup is causing significant strain, especially to your upper back, wrists, and neck. Immediate ergonomic adjustments and regular exercises are strongly recommended to reduce pain and prevent further issues. If symptoms persist or worsen, consult a healthcare professional.
