

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red risk (Angle: 158.16467546307916°)
- Shoulder Elevation: Green risk (Angle: 3.4036803245544434°)
- Elbow Angle: Red risk (Angle: 130.18951456579921°)
- Wrist Deviation: Red risk (Angle: 179.17142911307909°)
- Pelvic Tilt: Yellow risk (Angle: 14.805450439453125°)

Workstation Analysis

Monitor:

- MonitorHeight: Red (Δ 118.70453041791916)
- ViewingDistance: Green (Δ 260.32965087890625)

Chair:

- SeatDepth: Green (Δ 95.02325439453125)

Risk Summary

Posture risk: RED (severe neck flexion, wrist deviation, and elbow angle; high pain in wrists/hands and neck).

Workstation risk: RED (monitor height violation, lack of external input devices, insufficient breaks). Immediate ergonomic intervention required.

Exercise Recommendations

Neck retraction: Gently pull your head straight back, keeping your chin level, to strengthen neck stabilizers. Hold for 5 seconds, repeat 10 times.

Wrist stretches: Extend your arm, palm up, and gently pull back on your fingers with the other hand. Hold for 15 seconds per side, repeat 3 times.

Shoulder blade squeezes: Sit upright and squeeze your shoulder blades together for 5 seconds, repeat 10 times to relieve upper back tension.

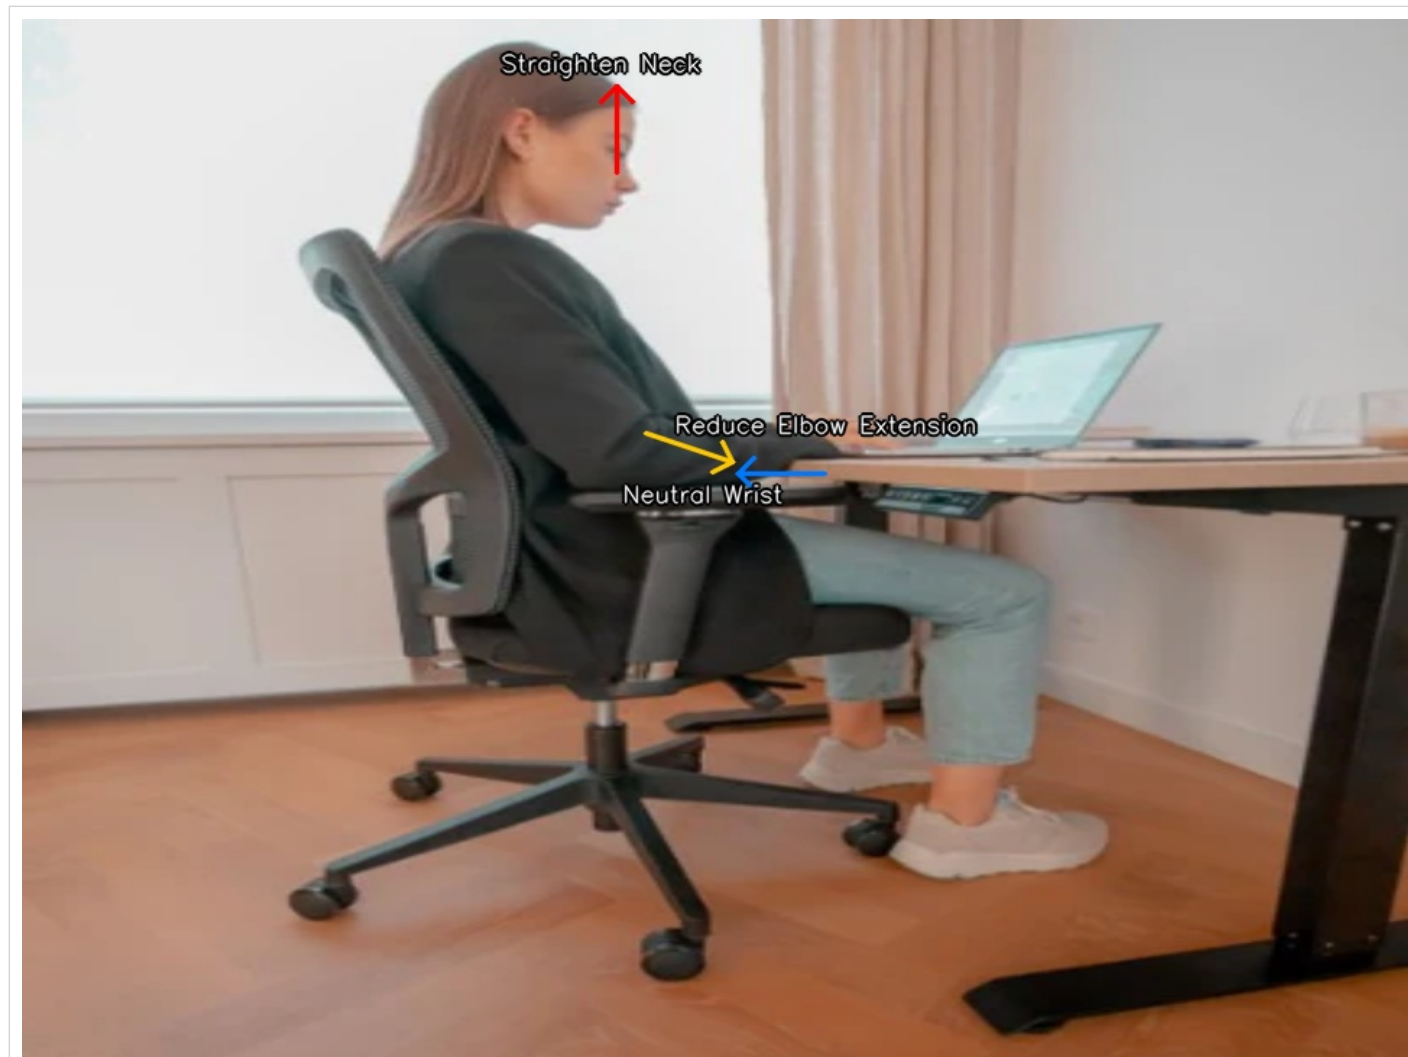

Seated pelvic tilts: Rock your pelvis forward and backward while seated to mobilize your lower back. Repeat 10–15 times.

Desk breaks: Stand up and walk or stretch every 30–60 minutes to reduce static load on neck, back, and wrists.

Final Advice

Your current posture and workstation setup present high ergonomic risks, especially to your wrists/hands and neck, as confirmed by both severe ISO 9241-5 violations and your reported pain. Immediate adjustments to monitor height, use of external input devices, and posture are critical. Prioritize frequent breaks and targeted

exercises to reduce symptoms and prevent further injury.
