

# POSTURA

## Ergonomics Evaluation Report

### Posture Analysis

---

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

### Workstation Analysis

---

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

### Pain & Risk Summary

---

Average Pain Level: 7

Main Pain Region(s): Neck, Elbows/Forearms, Hips/Glutes (VAS 8)

### Posture & Ergonomic Corrections

---

- Correct Elbow Angle: Adjust your sitting position so your elbows are bent at 90–100°, keeping forearms parallel to the floor. This reduces strain on your upper back and wrists.
- Reduce Pelvic Tilt: Sit with your hips fully back in the chair and use lumbar support to maintain a neutral pelvis. Avoid slouching or tilting your pelvis forward.
- Neutral Wrist Alignment: Keep wrists straight and in line with your forearms while typing. Avoid bending wrists up, down, or sideways.
- Raise Monitor Height: Elevate your laptop or monitor so the top of the screen is at or just below eye level. This will reduce neck flexion and upper back strain.
- Add External Keyboard and Mouse: Use an external keyboard and mouse to allow for proper arm and wrist positioning, especially when the laptop is elevated.

### Final Advice

---

Your assessment shows significant ergonomic risks, especially for your upper back and wrists. Immediate workstation adjustments and regular exercises are strongly recommended to reduce pain and prevent further strain. Prioritize monitor height and external input devices for best results.
