

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Elbows/Forearms, Hips/Glutes (VAS 8)

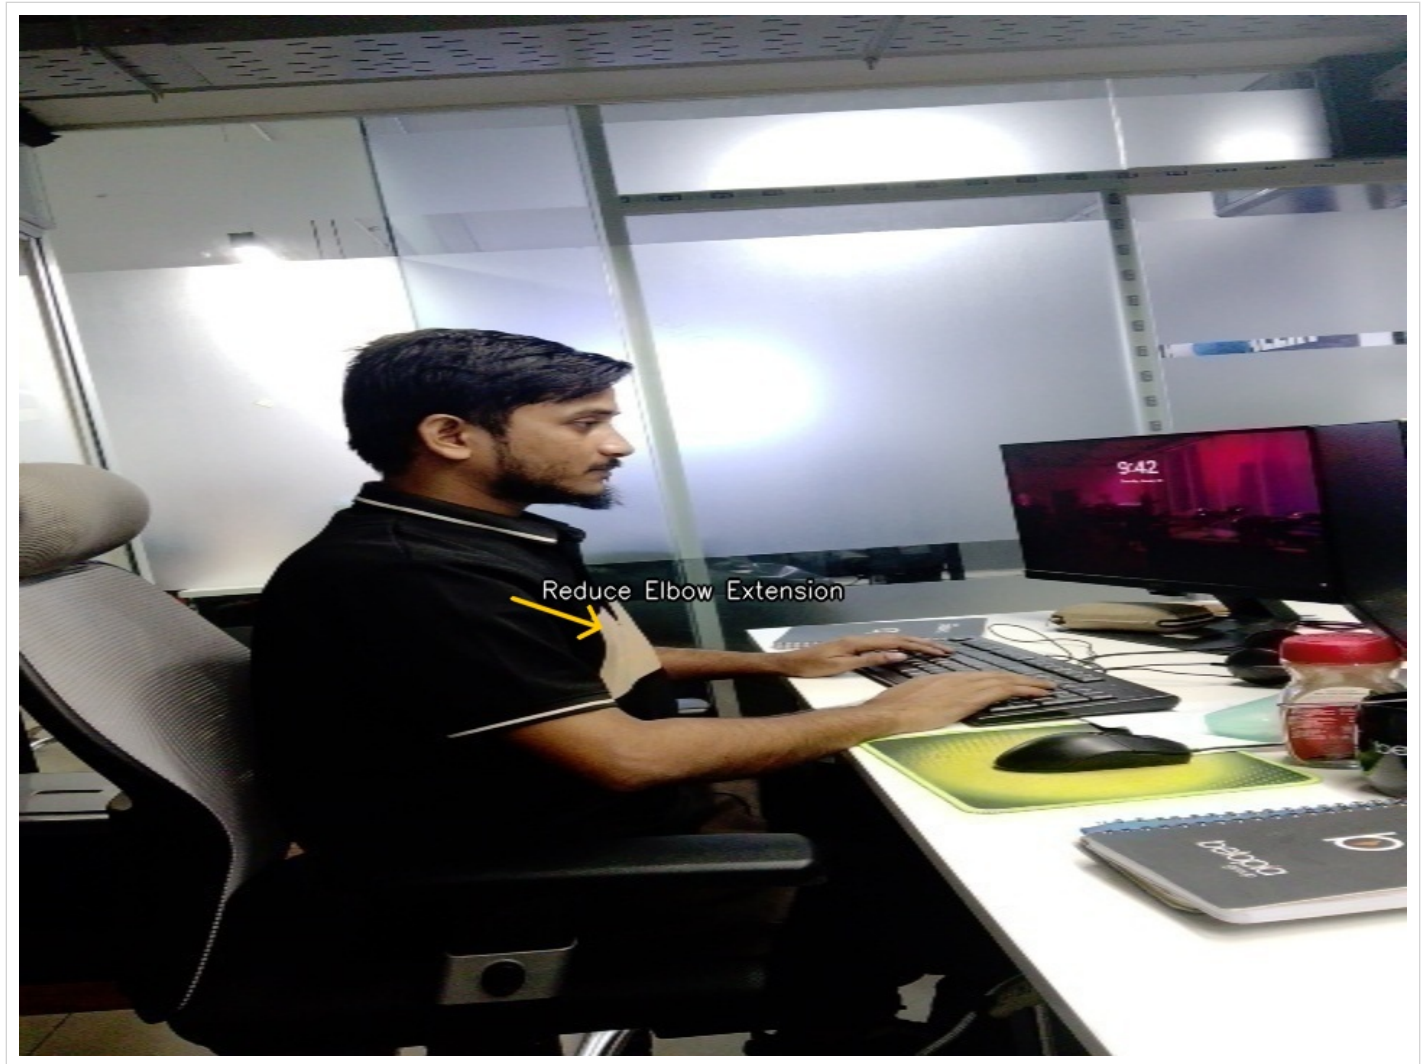

Posture & Ergonomic Corrections

- Bring elbows closer to a 90–100° angle by adjusting arm position and moving input devices closer. This reduces strain and aligns with ISO 9241-5 recommendations.
- Sit with hips and pelvis upright, avoiding excessive forward tilt. Use lumbar support if needed to maintain a neutral pelvic position, as required by ISO 9241-5.
- Relax shoulders and avoid elevation by adjusting chair height and armrest position. This prevents upper back and shoulder tension, in line with ISO 9241-5.
- Keep wrists in a neutral, straight position while typing to minimize deviation and reduce risk of tingling or stiffness.
- Raise the monitor by approximately 25 cm so the top of the screen is at or just below eye level. This reduces neck flexion and upper back strain, as per ISO 9241-5.
- Move the keyboard 10 cm closer to the edge of the desk to allow elbows to remain at a 90–100° angle and wrists to stay neutral.
- Adjust or add lumbar support to maintain a neutral pelvic tilt and support the lower back, reducing upper back pain.

Final Advice

Your assessment shows significant ergonomic risks, especially for your upper back and lower back. Prioritize workstation adjustments and posture corrections immediately. If pain persists or worsens, consult a healthcare

provider.
