

POSTURA

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Green
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Yellow

Workstation Analysis

Pain & Risk Summary

Average Pain Level: 6

Main Pain Region(s): Elbows/Forearms (VAS 8)

Posture & Ergonomic Corrections

- Bring your elbows closer to a 90-120° angle by moving your forearms closer to your body. This will reduce strain on your arms and wrists.
- Keep your wrists straight and avoid bending them upwards or sideways while typing or using the mouse.
- Sit upright and keep your neck in a neutral position, avoiding forward flexion. Your ears should be in line with your shoulders.
- Elevate your laptop screen by approximately 8 cm so the top of the screen is at or just below eye level, reducing neck flexion.
- Position your external keyboard 10 cm closer to the edge of your desk to allow your elbows to rest at a more open angle (90-120°).
- Adjust your chair height so your forearms are parallel to the floor when typing, supporting a neutral wrist and elbow position.

Final Advice

Your assessment shows significant ergonomic risks, especially for your elbows, wrists, and neck. Address workstation setup and posture as soon as possible to reduce pain and prevent further issues. If pain or tingling worsens, consult a healthcare professional.
