

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

Pain & Risk Summary

Average Pain Level: 7

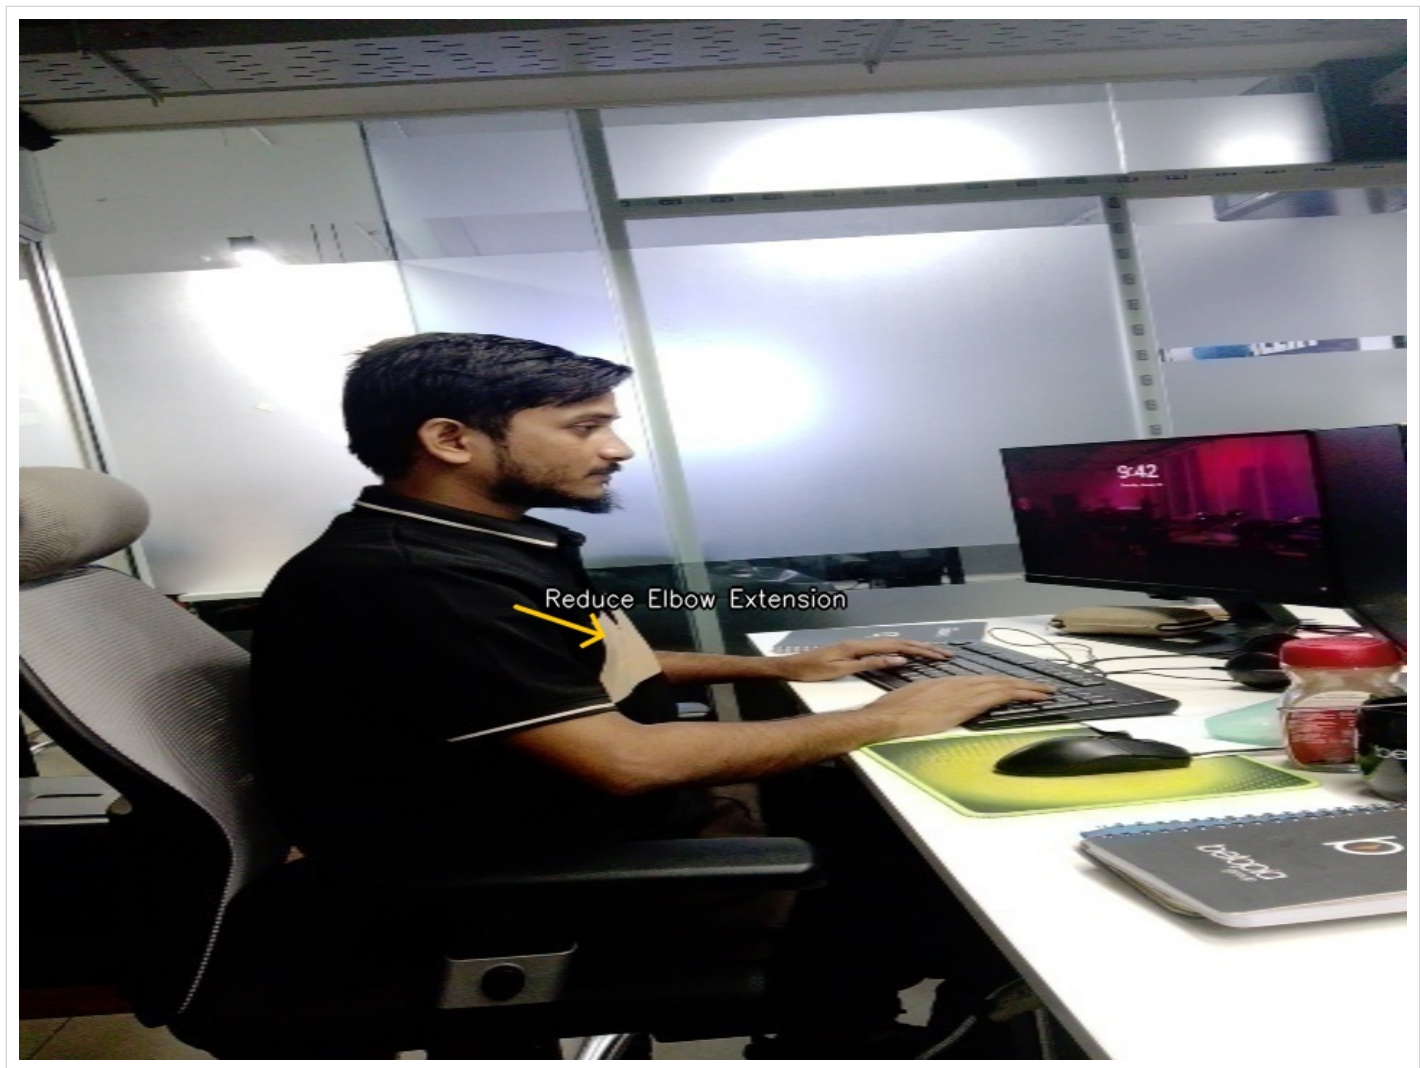

Main Pain Region(s): Neck, Elbows/Forearms, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Adjust your arm position so that your elbows are bent between 90° and 110°. This reduces strain on the upper back and shoulders, and aligns with ISO 9241-5 recommendations for neutral elbow posture.
- Sit with your pelvis in a more neutral position by ensuring your hips are level and your lower back is supported. This helps prevent excessive pelvic tilt and reduces upper back discomfort.
- Relax your shoulders and avoid shrugging. Keep them low and neutral to minimize muscle fatigue and upper back pain.
- Keep your wrists in a straight, neutral position while typing to reduce strain and tingling in the hands.
- Raise your monitor by approximately 8 cm so that the top of the screen is at or just below eye level. This will help maintain a neutral neck posture and reduce neck and upper back strain.
- Adjust your chair height so your elbows are at desk level and your feet are flat on the floor. This supports a neutral pelvic tilt and proper elbow angle.

Final Advice

Your assessment indicates significant ergonomic risks, especially for your upper back and neck, with high pain intensity reported. Address workstation setup and posture corrections promptly. If pain persists or worsens, consult a healthcare professional.
