

POSTURA

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Green
- Elbow Angle: Yellow
- Wrist Deviation: Red
- Pelvic Tilt: Green

Workstation Analysis

- Chair: SeatDepth: Green

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Wrists/Hands (VAS 8)

Posture & Ergonomic Corrections

- Bring your screen higher so your neck flexion is less than 15°. This will help keep your head upright and reduce neck and upper back strain.
- Adjust your typing position so your wrists remain straight (neutral), not bent upwards or sideways. This reduces pressure on nerves and tendons in your wrists.
- Bring your elbows closer to a 90° angle by moving your chair closer to the desk or adjusting desk height. This decreases muscle fatigue in the arms and shoulders.
- Raise your laptop screen by approximately 8 cm using a riser or stack of books so the top of the screen is at or just below eye level. This will reduce neck flexion.
- Use an external keyboard placed at elbow height to keep wrists straight and elbows at about 90°. This helps prevent wrist extension and reduces upper back strain.

Final Advice

Your upper back pain is severe and your posture shows significant neck flexion and wrist deviation. Prioritize workstation adjustments and equipment upgrades to reduce strain. If pain persists or worsens, consult a healthcare professional.
