

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Red
- Wrist Deviation: Red
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Elbows/Forearms, Wrists/Hands, Hips/Glutes (VAS 8)

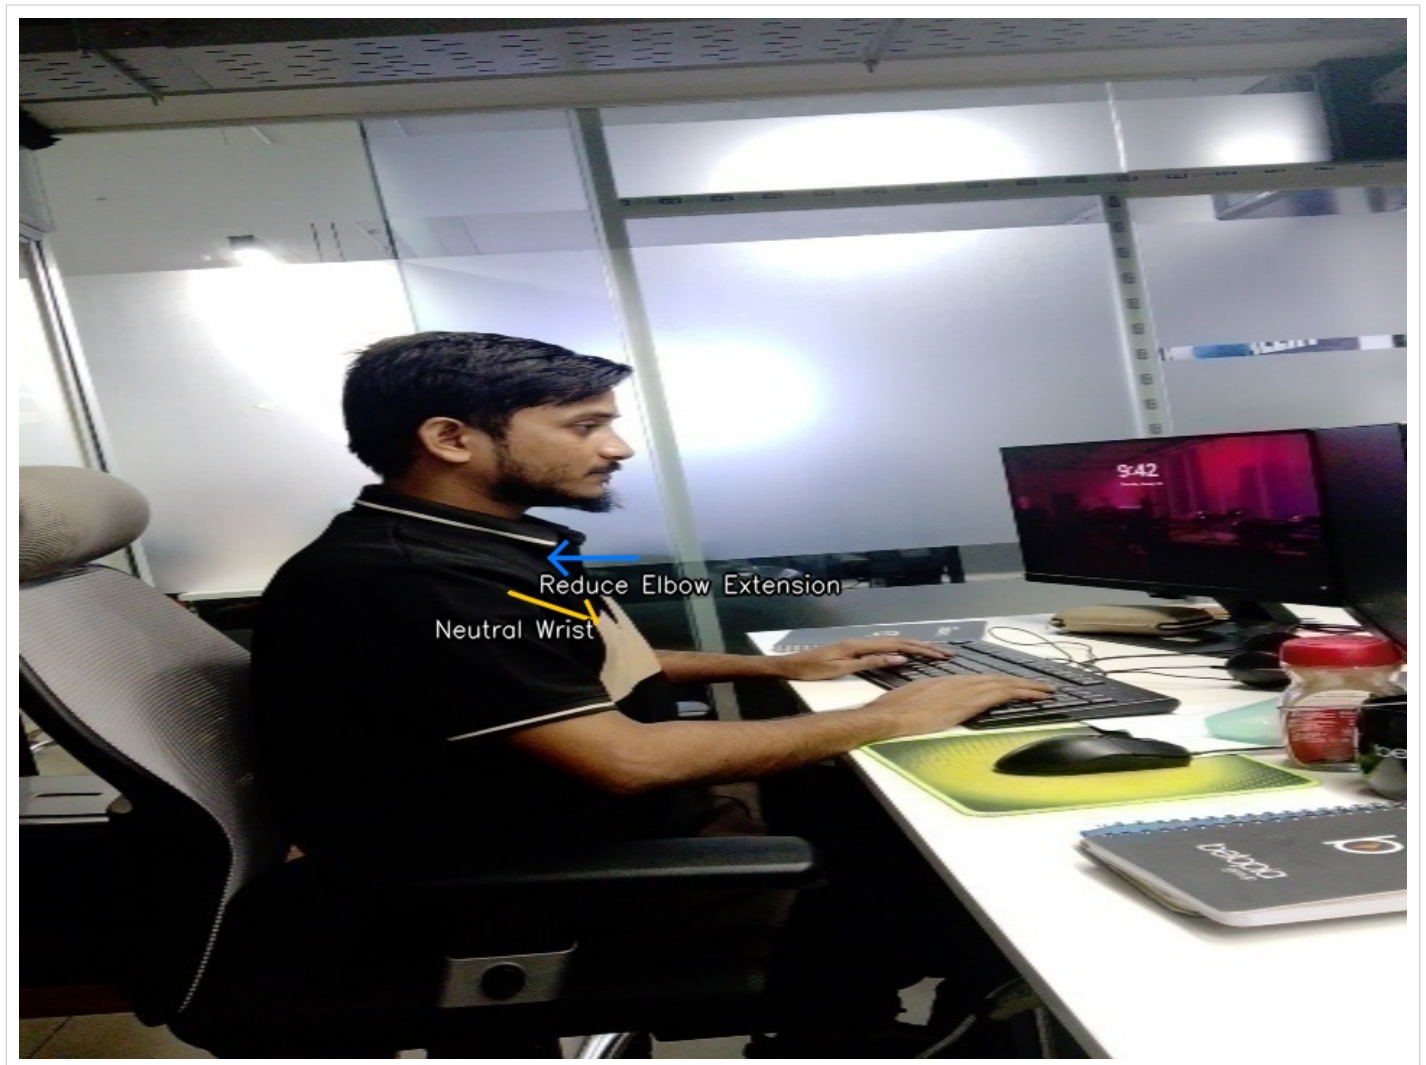

Posture & Ergonomic Corrections

- Bring your elbows closer to a 90–100° angle by lowering your chair or raising your desk. This will reduce strain on your upper back and shoulders.
- Keep wrists straight and avoid bending upwards or sideways while typing. Adjust keyboard height or use a wrist rest to maintain a neutral wrist position.
- Sit with your hips level and your pelvis upright. Use a lumbar support or adjust your chair backrest to maintain a neutral pelvic position.
- Relax your shoulders and avoid shrugging while working. Adjust armrests or desk height so your shoulders remain low and relaxed.
- Keep your neck straight and avoid bending forward. Raise your monitor so the top of the screen is at or just below eye level.
- Raise your monitor by approximately 8 cm so the top of the screen is at or just below eye level, reducing neck flexion and upper back strain.
- Lower your keyboard by about 3 cm to help keep your wrists in a neutral position and reduce wrist extension.
- Lower your chair by 4 cm to bring your elbows closer to a 90–100° angle, reducing upper back and shoulder tension.
- Add a lumbar support cushion to maintain a neutral pelvic tilt and support your lower back.

Final Advice

Your assessment indicates high ergonomic risk, especially for your upper back, wrists, and lower back. Address

workstation setup and posture urgently to reduce pain and prevent further issues. If pain persists or worsens, consult a healthcare professional. Safety note: Perform all exercises slowly and stop if you experience pain or discomfort.
