

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Red
- Wrist Deviation: Red
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Elbows/Forearms, Wrists/Hands, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Bring your elbows closer to a 90-100° angle by moving your keyboard and mouse closer to your body. This reduces strain on your forearms and shoulders, in line with ISO 9241-5 recommendations.
- Keep your wrists straight and avoid bending them upwards or sideways while typing or using the mouse. This helps prevent nerve compression and aligns with ISO 9241-5 for wrist posture.
- Sit back fully in your chair with your hips and pelvis upright. Use lumbar support to maintain a neutral pelvic position and reduce lower back strain.
- Raise your monitor by approximately 25 cm so the top of the screen is at or just below eye level. This will reduce neck flexion and upper back strain, as required by ISO 9241-5.
- Position your keyboard closer to the edge of your desk to allow your elbows to remain at your sides and reduce overextension.

Final Advice

Your assessment shows significant ergonomic risks, especially for your upper back and wrists. Prioritize raising your monitor and improving wrist and elbow posture. Use recommended equipment and perform the exercises regularly. If pain persists or worsens, consult a healthcare professional. Safety note: Perform all exercises gently and stop if you experience pain or discomfort.
