

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

Pain & Risk Summary

Average Pain Level: 7

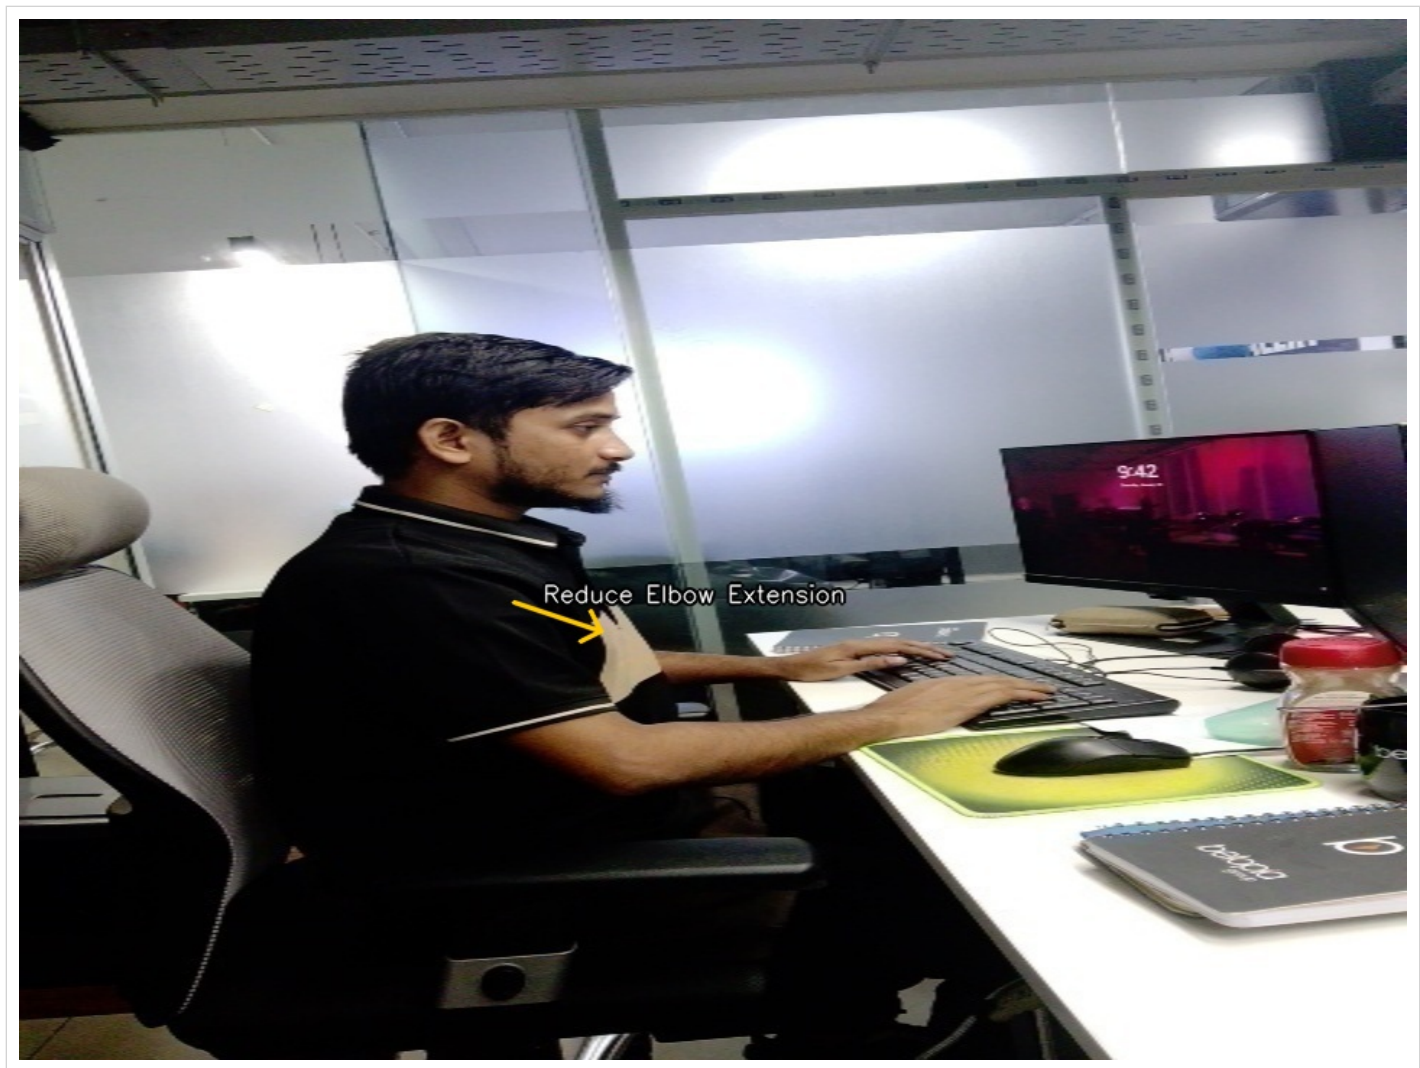

Main Pain Region(s): Neck, Elbows/Forearms, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Bring elbows closer to a 90° angle by moving your forearms closer to your body. This reduces strain on the upper back and wrists, aligning with ISO 9241-5 recommendations for neutral elbow posture.
- Sit with your hips and pelvis in a more neutral position by keeping your feet flat on the floor and your back against the chair. This helps decrease lower back and upper back strain, as required by ISO 9241-5.
- Relax your shoulders and avoid shrugging while typing. Keep them low and relaxed to minimize upper back and neck tension, in line with ISO 9241-5.
- Keep wrists in a neutral, straight position while typing to reduce strain and tingling in the hands, as recommended by ISO 9241-5.
- Raise your monitor by approximately 8 cm so the top of the screen is at or just below eye level. This will reduce neck flexion and upper back strain, as required by ISO 9241-5.
- Adjust your chair so your hips are level with or slightly higher than your knees, supporting a neutral pelvic tilt and reducing upper back discomfort.

Final Advice

Your assessment shows high ergonomic risk, especially for your upper back and wrists. Prioritize workstation adjustments and posture corrections, and consider the recommended equipment. If pain persists or worsens, consult a healthcare professional. Always perform exercises gently and stop if you feel pain.
