

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Red
- Wrist Deviation: Red
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Elbows/Forearms, Wrists/Hands, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Bring your elbows closer to a 90° angle by moving your forearms closer to your body. This reduces strain on the upper back and shoulders, aligning with ISO 9241-5 recommendations for neutral elbow posture.
- Keep your wrists straight and avoid bending them upwards or sideways while typing. This helps prevent tingling and stiffness, and meets ISO 9241-5 requirements for minimal wrist deviation.
- Sit back fully in your chair with your pelvis upright, not tilted forward or backward. This supports your lower and upper back, reducing pain and stiffness.
- Raise your monitor by approximately 8 cm so the top of the screen is at or just below eye level. This will reduce neck flexion and upper back strain, as required by ISO 9241-5.
- Lower your keyboard by about 3 cm to allow your elbows and wrists to remain in a neutral, relaxed position, minimizing wrist extension and upper back tension.

Final Advice

Your assessment shows high ergonomic risk, especially for your upper back and wrists. Prioritize correcting elbow and wrist posture, raising your monitor, and using recommended equipment. Perform the exercises regularly, and if pain persists or worsens, consult a healthcare professional. Safety note: Stop exercises if you feel sharp pain, numbness, or dizziness, and seek medical advice.
