Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Elbows/Forearms, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Bring your elbows closer to a 90° angle by adjusting your arm position and moving your keyboard/mouse closer. This will reduce strain on your forearms and upper back.
- Sit with your hips and pelvis in a neutral position (not tilting forward or backward). Use lumbar support if needed to maintain the natural curve of your lower back.
- Relax your shoulders and avoid shrugging. Adjust armrests or desk height so your shoulders remain low and relaxed while typing.
- Keep your wrists in a neutral, straight position while typing and using your mouse to reduce strain and risk of tingling or stiffness.
- Raise your laptop screen or use an external monitor so the top of the screen is at or just below eye level. This will help reduce neck and upper back strain.
- Move your keyboard closer to the edge of the desk to allow your elbows to remain close to your body and at a 90° angle.
- Add a lumbar support cushion to your chair to help maintain a neutral pelvic tilt and support your lower back.

Final Advice

Your workstation setup and posture present significant ergonomic risks, especially for your upper back, wrists, and lower back. Prioritize workstation adjustments and posture corrections immediately. If pain persists or worsens, consult a healthcare professional. Always perform exercises gently and stop if you experience pain.
