

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

Pain & Risk Summary

Average Pain Level: 7

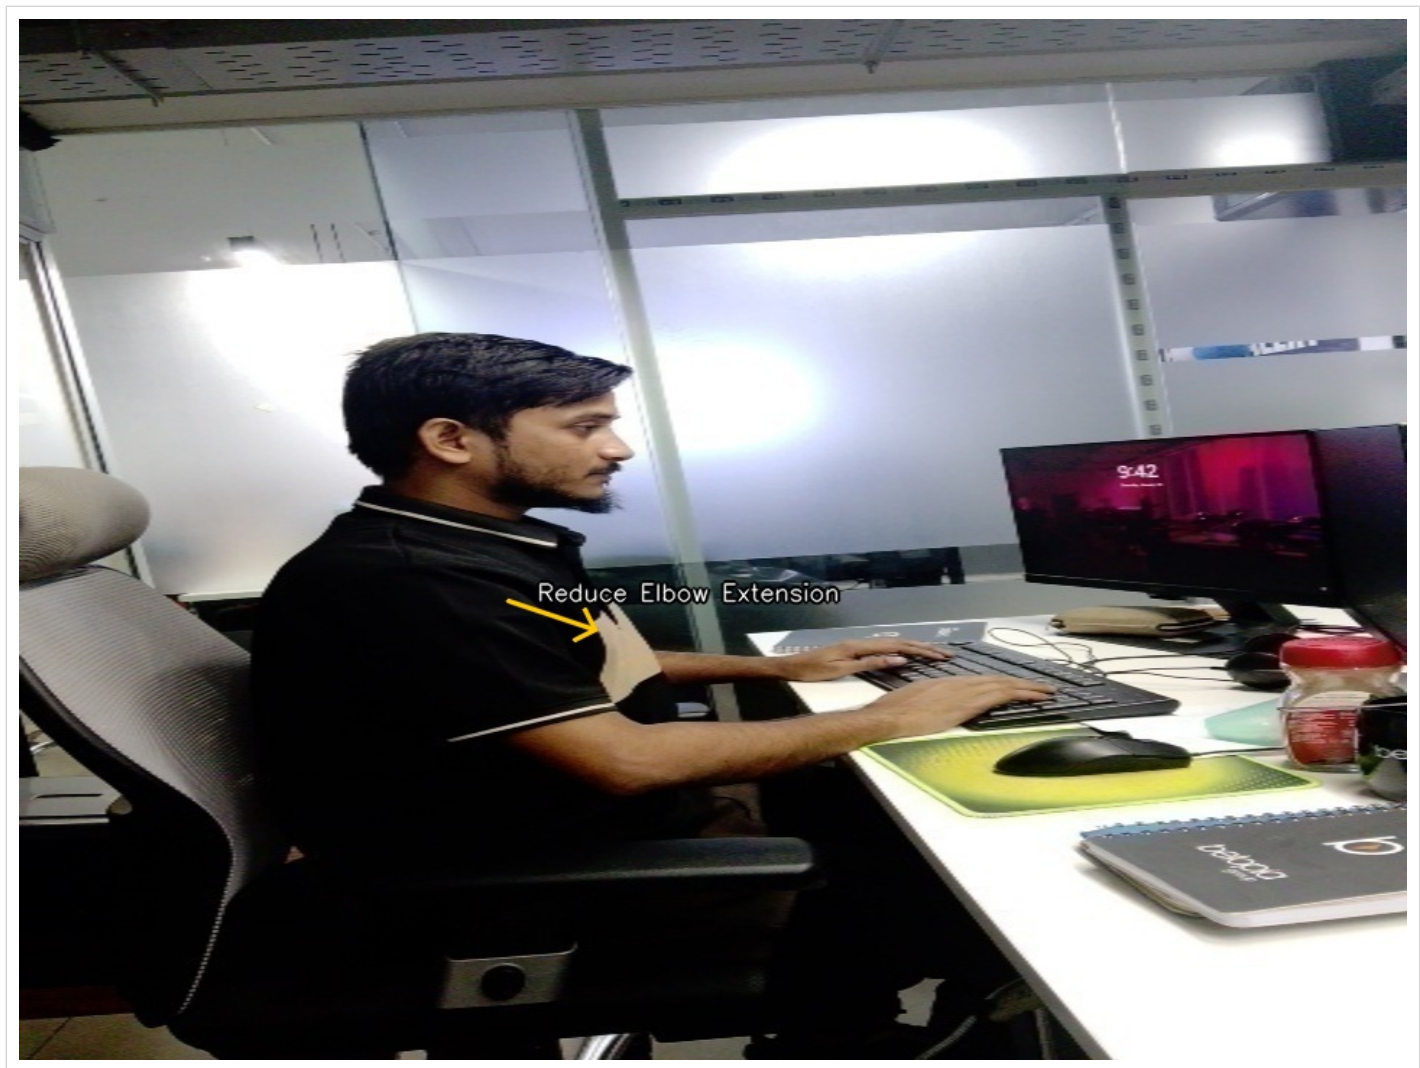

Main Pain Region(s): Neck, Elbows/Forearms, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Bring elbows closer to a 90-100° angle by moving your forearms closer to your torso. This reduces strain on the upper back and shoulders, in line with ISO 9241-5 recommendations.
- Sit back fully in your chair with your pelvis neutral, not tilted forward. This helps maintain lumbar support and reduces upper and lower back strain.
- Relax your shoulders and avoid shrugging to minimize elevation. This reduces tension in the upper back and neck.
- Keep wrists in a neutral, straight position while typing to prevent tingling and stiffness, as recommended by ISO 9241-5.
- Raise your monitor by approximately 8 cm so the top of the screen is at or just below eye level. This will reduce neck flexion and upper back strain.
- Connect an external keyboard and mouse to your laptop to allow for proper arm and wrist positioning, minimizing wrist deviation and elbow extension.

Final Advice

Your assessment shows significant ergonomic risks, especially for your upper back and wrists. Prioritize workstation adjustments and posture corrections to address pain and prevent further strain. Perform the recommended exercises regularly, and consider the suggested equipment for optimal support. If pain persists or worsens, consult a healthcare professional.
