

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

Pain & Risk Summary

Average Pain Level: 7

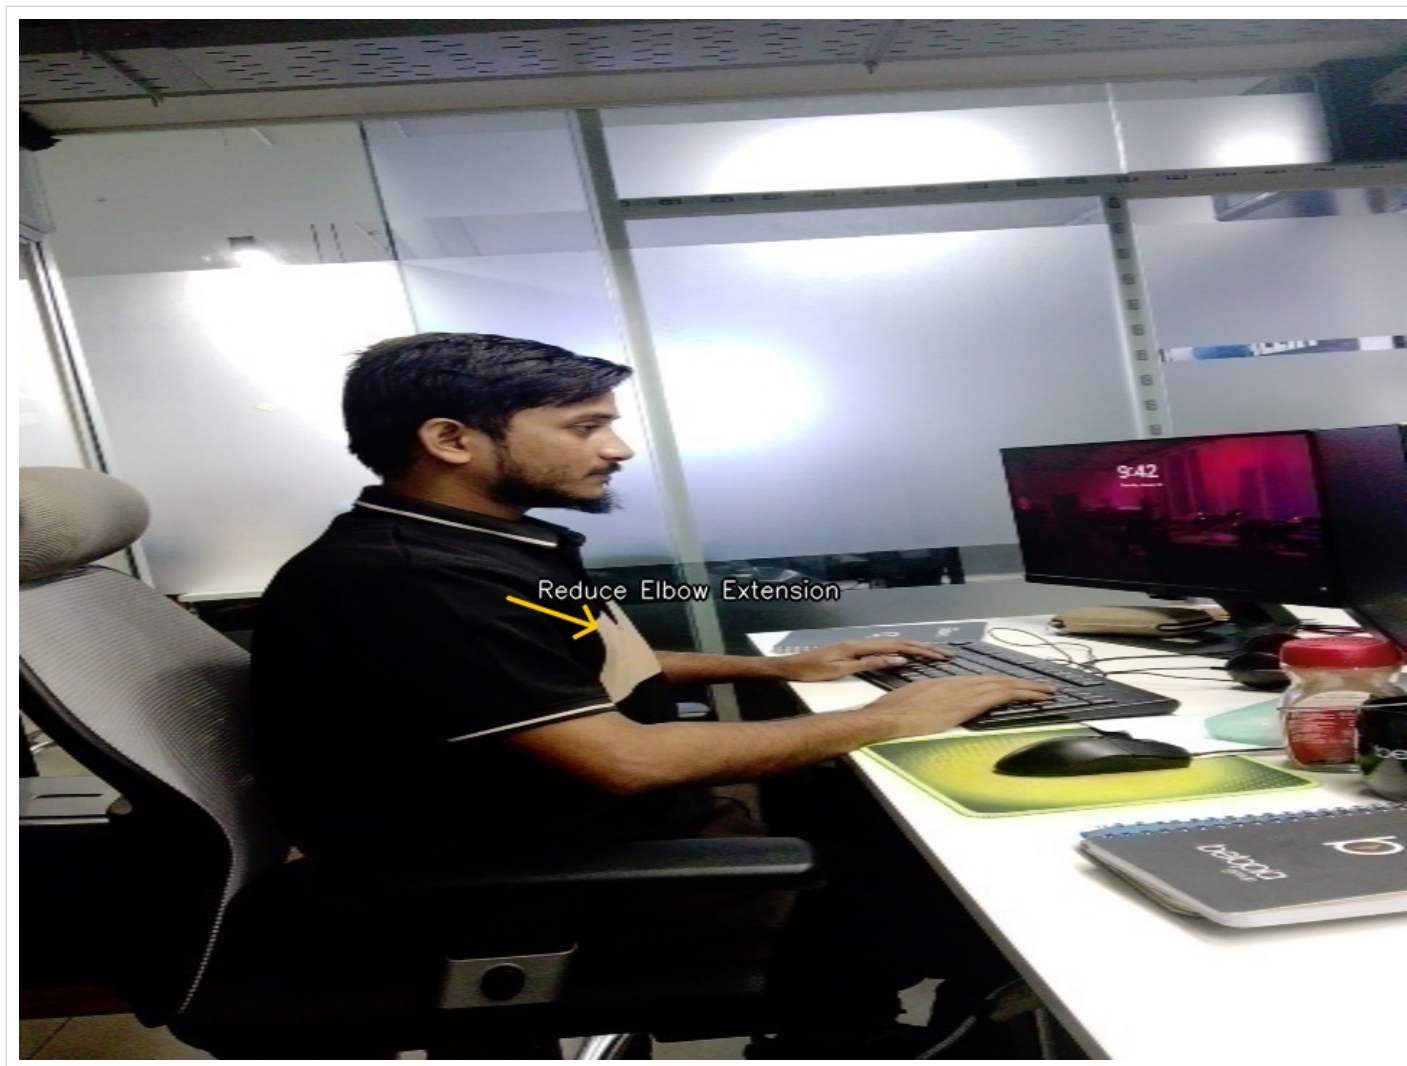

Main Pain Region(s): Neck, Elbows/Forearms, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Bring your elbows closer to a 90° angle by adjusting your chair height or armrest position. This will reduce strain on your forearms and shoulders, in line with ISO 9241-5 recommendations.
- Sit with your hips and pelvis in a more neutral position by ensuring your feet are flat on the floor and your lower back is supported. This helps maintain spinal alignment and reduces upper back discomfort.
- Relax your shoulders and avoid elevating them while typing or using your mouse. Adjust your armrests so your shoulders remain relaxed, minimizing muscle tension.
- Raise your monitor by approximately 8 cm so the top of the screen is at or just below eye level. This will help you maintain a neutral neck posture and reduce neck and upper back strain.
- Adjust your chair height so your elbows are at a 90° angle when typing. This will reduce strain on your shoulders and wrists.
- Add or adjust lumbar support to maintain a slight curve in your lower back, reducing pelvic tilt and upper back discomfort.

Final Advice

Your assessment shows high ergonomic risk, especially for your upper back, shoulders, and lower back. Prioritize workstation adjustments and posture corrections immediately. Perform recommended exercises regularly, and if pain persists or worsens, consult a healthcare professional. Safety note: Stop any exercise if you feel sharp pain, dizziness, or numbness.
