

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Elbows/Forearms, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Adjust your arm position so your elbows are bent at approximately 90–100°, not extended beyond 110°, to reduce strain and comply with ISO 9241-5.
- Relax your shoulders and avoid elevating them while typing or using the mouse. Keep shoulders in a neutral, relaxed position to reduce muscle tension.
- Keep your neck straight and avoid bending forward. Your chin should be parallel to the floor, with ears aligned over your shoulders.
- Sit with your pelvis in a neutral position, avoiding excessive forward tilt. Your hips should be level with or slightly higher than your knees.
- Raise your monitor by approximately 8–12 cm so the top of the screen is at or just below eye level. This will help maintain a neutral neck posture and reduce neck and upper back strain.
- Adjust your chair height so your elbows are at desk height and your feet are flat on the floor. This supports proper elbow and pelvic alignment.

Final Advice

Your assessment shows high ergonomic risks, especially for your upper back and lower back, with significant pain reported. Immediate workstation adjustments and posture corrections are recommended. If pain persists or worsens, consult a healthcare professional. Remember to perform the exercises as prescribed and take regular breaks every hour.
