

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

Pain & Risk Summary

Average Pain Level: 7

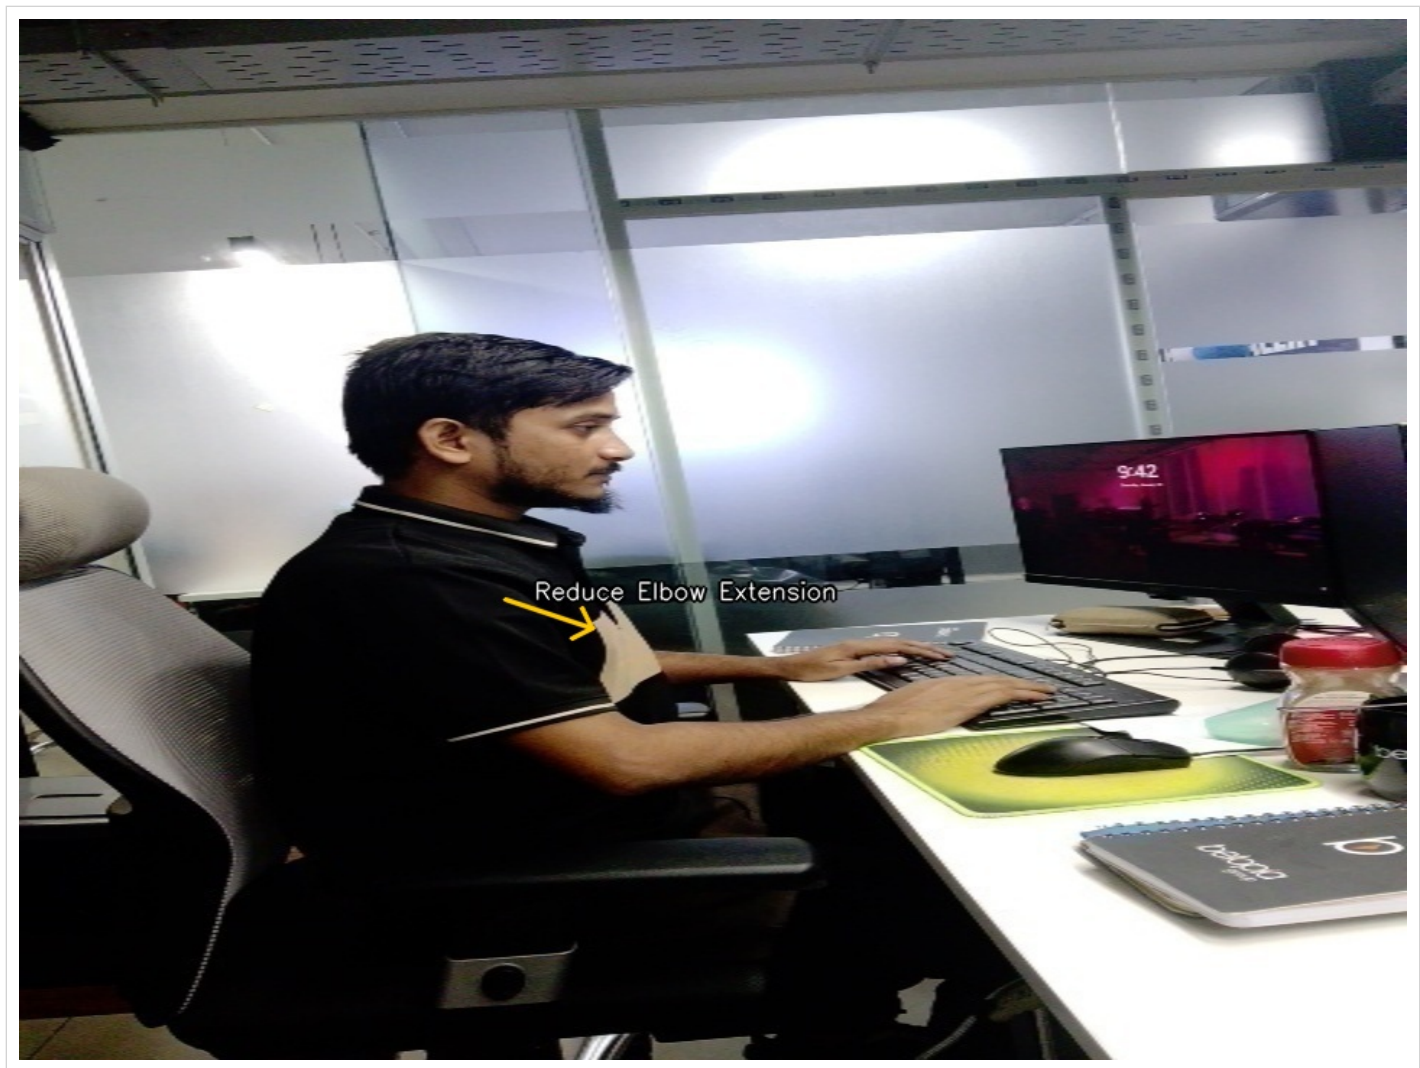

Main Pain Region(s): Neck, Elbows/Forearms, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Bring elbows closer to a 90–100° angle by adjusting chair height or armrest position to decrease extension and reduce strain.
- Relax and lower shoulders by adjusting armrests or desk height to prevent elevation and reduce upper back and shoulder tension.
- Keep wrists in a neutral, straight position while typing or using the mouse to minimize deviation and reduce risk of discomfort.
- Raise the monitor by approximately 25 cm so the top of the screen is at or just below eye level, reducing neck flexion and upper back strain.
- Adjust chair height so elbows are at a 90–100° angle when typing, supporting forearms and reducing shoulder and upper back load.

Final Advice

Your assessment shows significant ergonomic risks, especially for your upper back and neck. Prioritize monitor height adjustment and elbow/shoulder support. Consistent posture corrections and recommended exercises can help reduce pain, but if symptoms persist or worsen, consult a healthcare professional. Always perform exercises gently and stop if you experience pain.
