

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

Pain & Risk Summary

Average Pain Level: 7

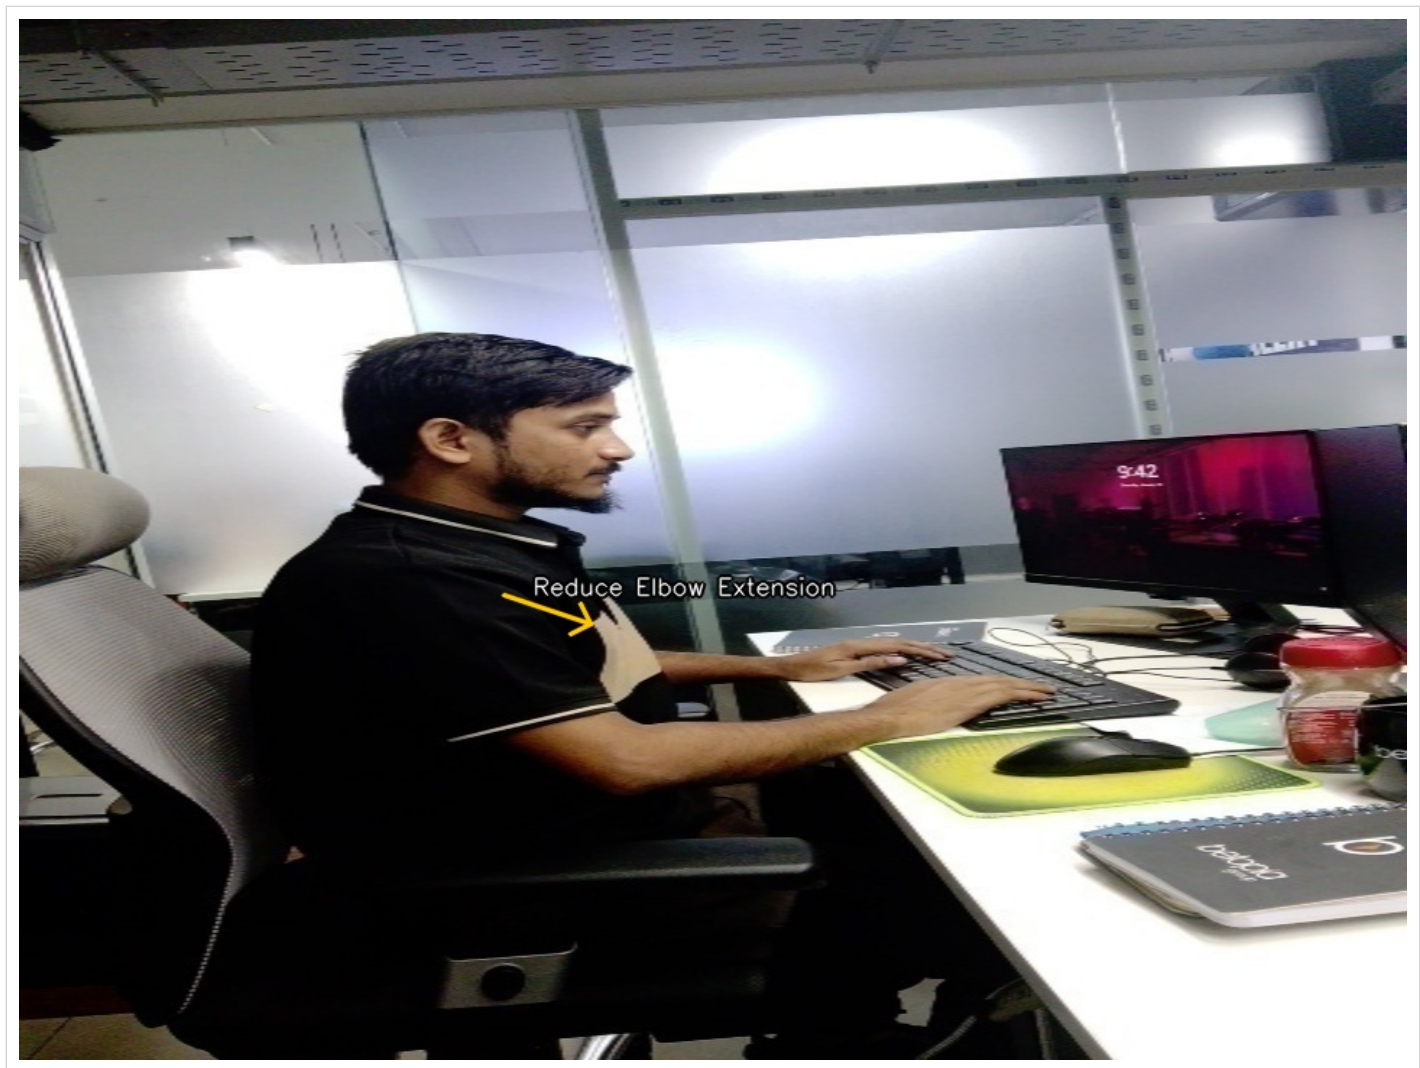

Main Pain Region(s): Neck, Elbows/Forearms, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Bring your elbows closer to a 90-100° angle by moving your chair closer to the desk or adjusting armrest height. This reduces strain on the upper back and shoulders.
- Sit with your hips fully back in the chair and use lumbar support to decrease forward pelvic tilt. This helps maintain a neutral spine and reduces upper back discomfort.
- Relax your shoulders and avoid shrugging. Adjust armrests or desk height so your shoulders are not elevated while typing or using the mouse.
- Raise your monitor by approximately 8 cm so the top of the screen is at or just below eye level. This will help keep your neck in a neutral position and reduce neck and upper back strain.
- Move your chair 5 cm closer to the desk to allow your elbows to rest comfortably at a 90-100° angle, reducing upper back and shoulder strain.

Final Advice

Your assessment shows high ergonomic risk, especially for your upper back and shoulders. Address workstation setup urgently and follow the recommended exercises and equipment changes. If pain or tingling worsens, consult a healthcare professional.
