

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Elbows/Forearms, Hips/Glutes (VAS 8)

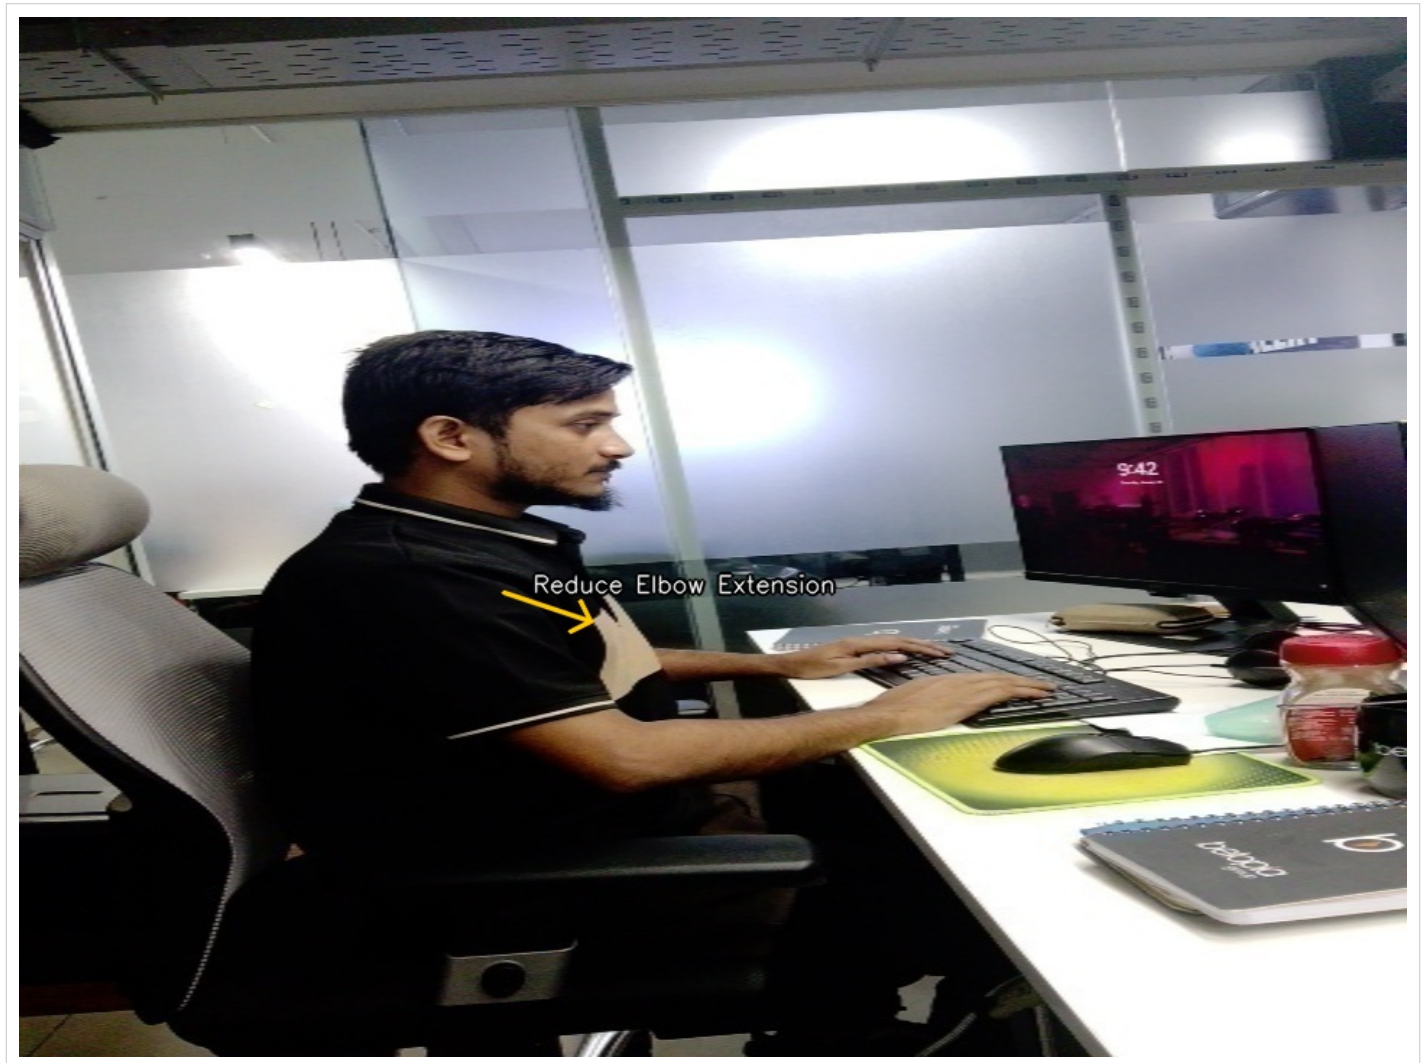

Posture & Ergonomic Corrections

- Bring elbows closer to a 90°-100° angle by adjusting arm position and chair height to reduce strain and comply with ISO 9241-5.
- Sit with hips and pelvis in a more neutral position by using lumbar support and adjusting seat pan angle to decrease forward tilt.
- Relax shoulders and adjust armrests so shoulders are not elevated, reducing muscle tension and aligning with ISO 9241-5.
- Keep neck in a neutral position by raising monitor height and sitting upright, minimizing forward head posture.
- Maintain wrists in a straight, neutral position by adjusting keyboard and mouse placement to reduce deviation.
- Raise the monitor by approximately 8 cm so the top of the screen is at or just below eye level, reducing neck flexion and upper back strain.
- Adjust chair height so elbows are at a 90°-100° angle and wrists are level with the keyboard, reducing shoulder and upper back load.
- Add or adjust lumbar support to maintain a neutral pelvic tilt and support the lower back, decreasing upper back and pelvic discomfort.
- Lower armrests so shoulders can relax and are not elevated, reducing tension in the shoulders and upper back.

Final Advice

Your assessment shows high ergonomic risk, especially for the upper back and shoulders. Address workstation

setup and posture urgently to reduce pain and prevent further strain. If pain persists or worsens, consult a healthcare professional. Always perform exercises gently and stop if you feel pain.
