

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Elbows/Forearms, Hips/Glutes (VAS 8)

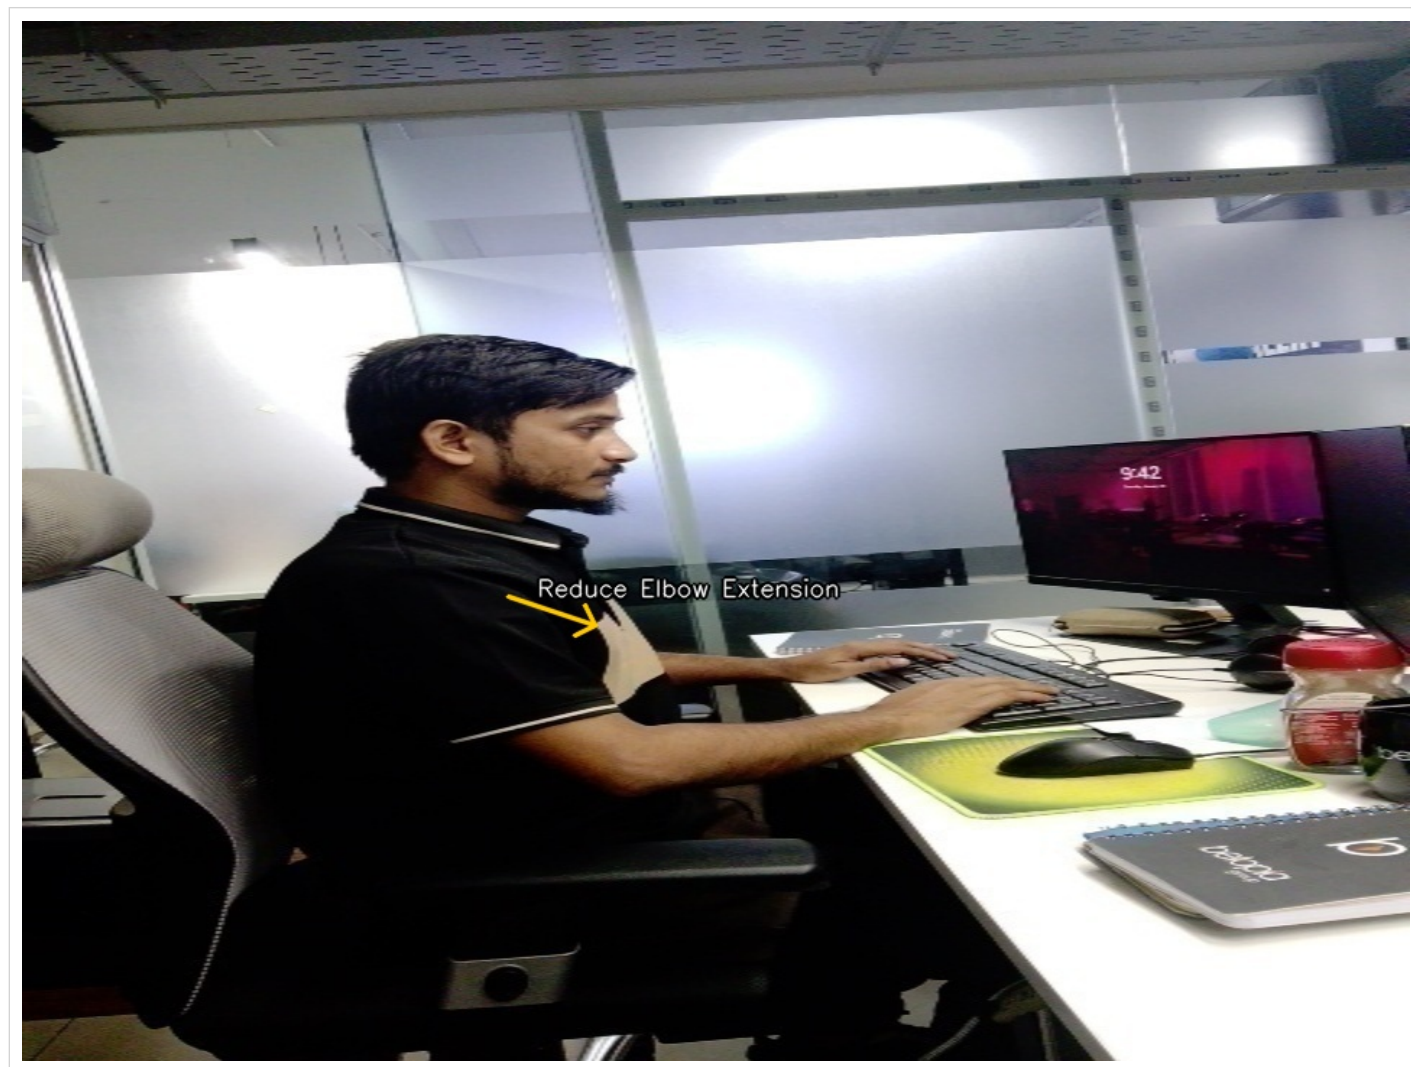

Posture & Ergonomic Corrections

- Correct Elbow Angle: Adjust your sitting position so that your elbows are bent at approximately 90–100°, with forearms parallel to the floor. Avoid extending elbows beyond this range to reduce strain on shoulders and upper back.
- Neutral Pelvic Position: Sit with your pelvis in a neutral position—avoid excessive forward or backward tilt. Ensure your hips are level and your lower back is supported to minimize upper back and lower back discomfort.
- Relax Shoulder Elevation: Lower your shoulders and keep them relaxed, not hunched or elevated. Adjust armrests or desk height so your shoulders remain in a neutral, relaxed position.
- Reduce Wrist Deviation: Keep your wrists straight and aligned with your forearms while typing or using the mouse. Avoid bending wrists sideways or upwards.
- Raise Monitor Height: Elevate your monitor so the top of the screen is at or just below eye level. This will reduce neck flexion and upper back strain.
- Adjust Chair Height and Armrests: Set your chair height so your feet are flat on the floor and your elbows are at desk height. Adjust armrests to support your forearms without lifting your shoulders.
- Add Lumbar Support: Use a lumbar cushion or adjust your chair's lumbar support to maintain the natural curve of your lower back, reducing pelvic tilt and upper back discomfort.

Final Advice

Your assessment shows significant ergonomic risks, especially for upper back and neck. Immediate workstation

adjustments and posture corrections are strongly recommended. If pain persists or worsens, consult a healthcare professional.
