Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

Pain & Risk Summary

Average Pain Level: 7

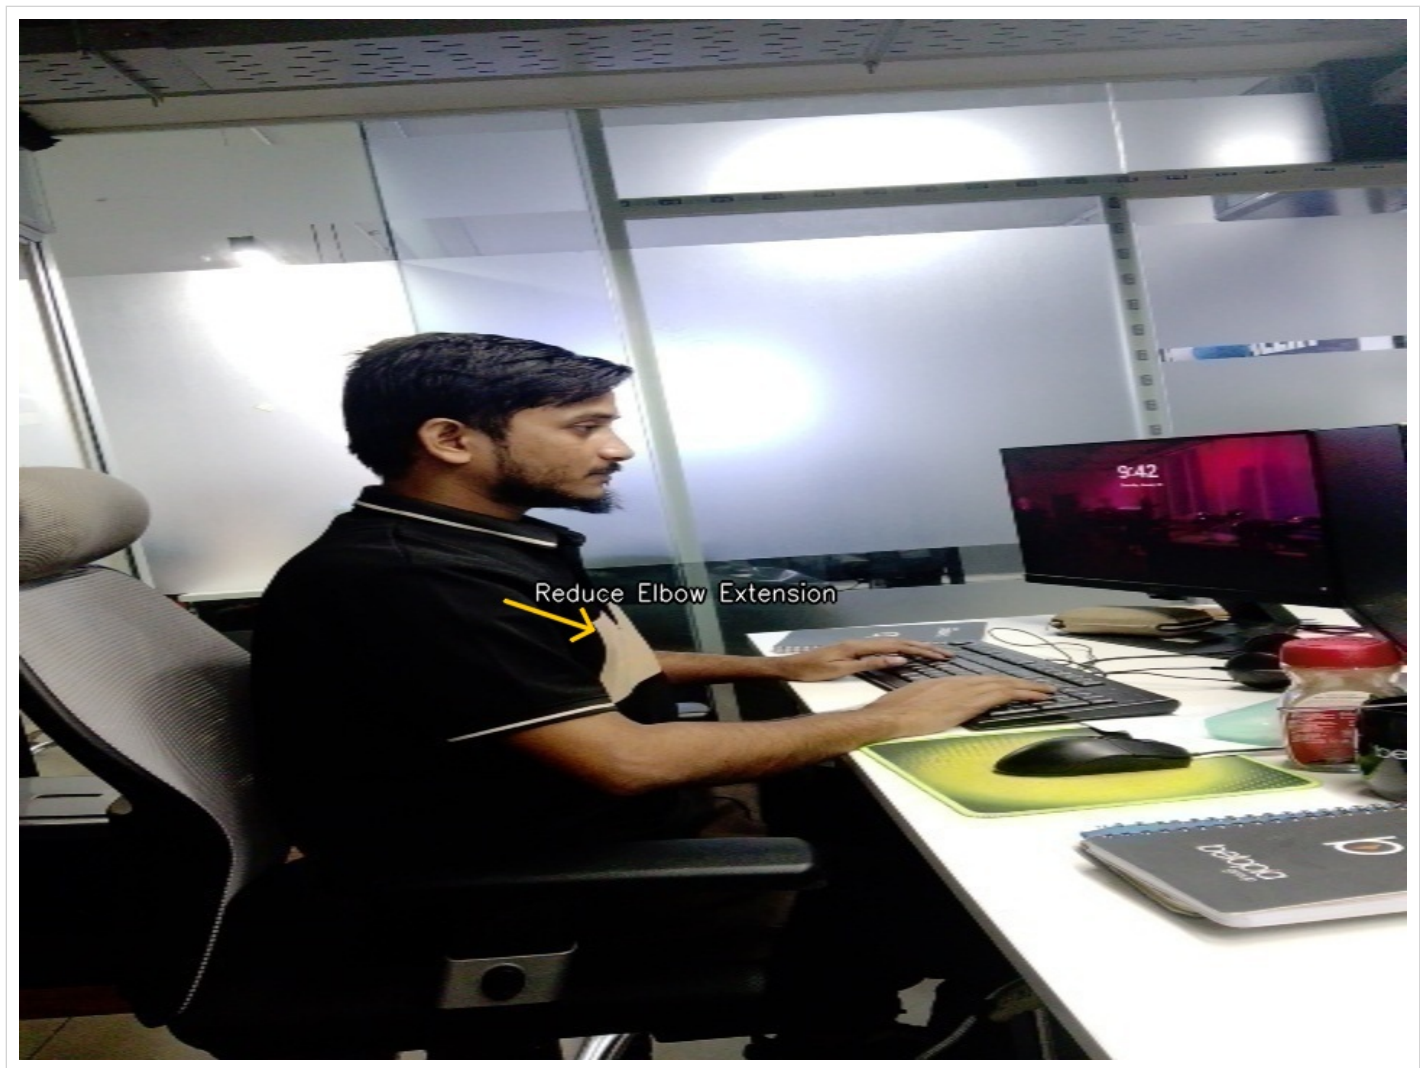

Main Pain Region(s): Neck, Elbows/Forearms, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Correct Elbow Angle: Adjust your sitting position so that your elbows are bent at approximately 90–100°. This reduces strain on your forearms and shoulders, and aligns with ISO 9241-5 recommendations.
- Reduce Pelvic Tilt: Sit with your hips fully back in the chair and ensure your pelvis is neutral (not tilted forward or backward). Use a lumbar support if needed to maintain this posture.
- Lower Shoulder Elevation: Relax your shoulders and keep them level, avoiding any elevation. Adjust armrests or desk height so your shoulders remain relaxed while typing.
- Raise Monitor Height: Elevate your monitor so that the top of the screen is at or just below eye level. This will help maintain a neutral neck posture and reduce upper back and neck strain.
- Adjust Chair Height and Armrests: Set your chair height so your feet are flat on the floor and your elbows are at desk height. Adjust armrests to support your forearms without lifting your shoulders.

Final Advice

Your workstation setup is causing significant upper back and neck strain, with high pain intensity reported. Immediate ergonomic adjustments and regular exercises are recommended. If pain persists or worsens, consult a healthcare professional.
