

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Red
- Wrist Deviation: Red
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

Pain & Risk Summary

Average Pain Level: 7

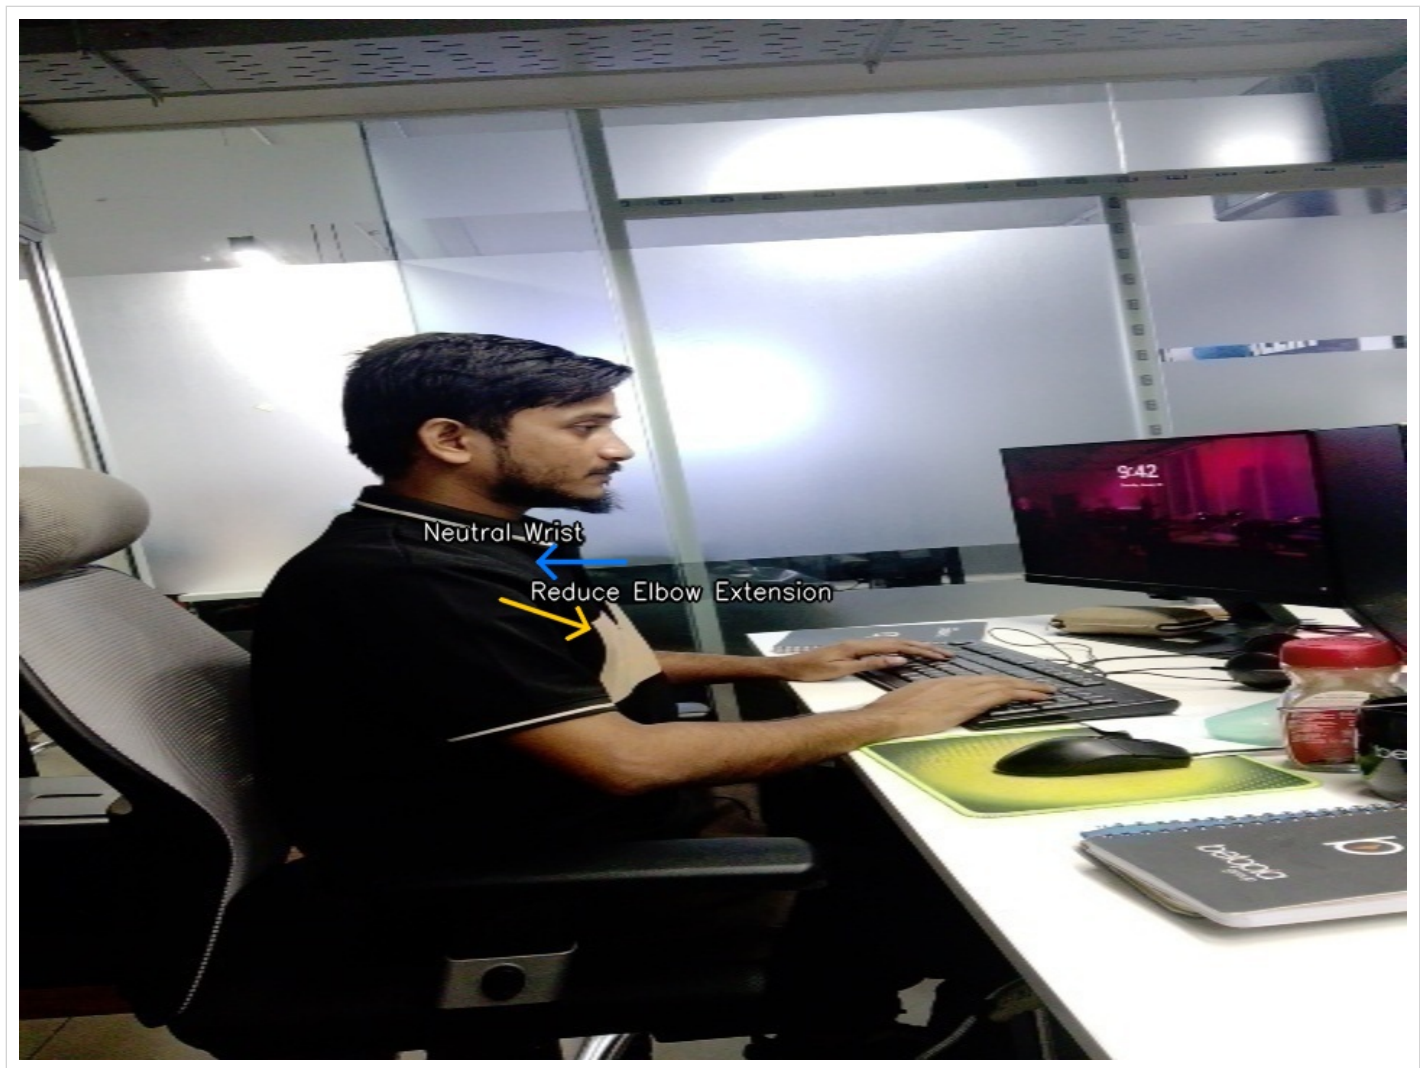

Main Pain Region(s): Neck, Elbows/Forearms, Wrists/Hands, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Reduce wrist deviation to under 10°: Adjust your hand and forearm alignment so your wrists remain straight (neutral), keeping deviation below 10°. This reduces strain on wrist tendons and nerves.
- Lower elbow angle to 100°: Bring your elbows closer to your body and adjust armrests or desk height so your elbow angle is approximately 100°, reducing muscle tension in shoulders and arms.
- Decrease pelvic tilt to under 10°: Sit with your hips fully back in the chair and use lumbar support to maintain a neutral pelvic position, keeping tilt below 10° to protect your lower back.
- Raise monitor by 25 cm: Increase your monitor height by 25 cm so the top of the screen is at or just below eye level, minimizing neck flexion and upper back strain.

Final Advice

Your assessment shows high ergonomic risk, especially for upper back, wrists, and elbows. Prioritize workstation adjustments and posture corrections immediately. If pain persists or worsens, consult a healthcare professional.
