

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red
- Shoulder Elevation: Green
- Elbow Angle: Yellow
- Wrist Deviation: Red
- Pelvic Tilt: Green

Workstation Analysis

- Chair: SeatDepth: Green

Pain & Risk Summary

Average Pain Level: 7

Main Pain Region(s): Neck, Wrists/Hands (VAS 8)

Posture & Ergonomic Corrections

- Raise monitor by 8 cm: Elevate your laptop screen so the top edge is at or just below eye level. This reduces neck flexion to under 10°, as required by ISO 9241-5, minimizing neck and upper back strain.
- Straighten wrists to neutral position: Adjust your typing posture so wrists remain flat (0-5° deviation) while typing. This reduces strain on wrists and hands, addressing ISO 9241-5 recommendations for wrist alignment.
- Bend elbows to 100° angle: Bring your chair closer or adjust arm position so elbows are bent at 100°, not exceeding 110°, to reduce upper limb fatigue per ISO 9241-5.
- Use external keyboard at desk edge: Place an external keyboard directly at the edge of your desk to keep wrists straight and elbows at the correct angle, reducing wrist deviation and upper limb strain.
- Position monitor 50-70 cm from eyes: Ensure your screen is at arm's length (50-70 cm) to prevent forward head posture and reduce neck flexion, in line with ISO 9241-5.

Final Advice

Your current setup places you at high risk for neck and wrist strain, especially given your ongoing pain and symptoms. Make workstation changes immediately. For all posture exercises, move slowly and stop if you feel pain, tingling, or increased discomfort. If symptoms persist or worsen, consult a healthcare professional.
