

POSTURA

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Green
- Elbow Angle: Red
- Wrist Deviation: Red
- Pelvic Tilt: Yellow

Workstation Analysis

Pain & Risk Summary

Average Pain Level: 6

Main Pain Region(s): Elbows/Forearms, Wrists/Hands (VAS 8)

Posture & Ergonomic Corrections

- Increase elbow angle to 100 degrees: Adjust your arm position so your elbows are open to about 100 degrees (slightly more than a right angle). This reduces muscle strain and nerve compression in the upper back and arms.
- Reduce wrist extension to under 10 degrees: Keep wrists straight and level with forearms while typing. Avoid bending wrists upward to minimize nerve compression and reduce tingling.
- Maintain neutral pelvic tilt at 0 degrees: Sit with hips level and avoid tilting pelvis forward or backward. Use a chair with proper lumbar support to help maintain a neutral spine.
- Move keyboard 8 cm closer: Position your keyboard so it is within easy reach, allowing your elbows to open to 100 degrees and wrists to remain straight.
- Raise chair seat to 46 cm: Adjust your chair height so your forearms are parallel to the desk and wrists remain neutral while typing.

Final Advice

Your upper back pain is severe and your workstation posture shows high-risk deviations, especially at the elbows and wrists. Please prioritize correcting your elbow and wrist positions and consider using ergonomic equipment. If pain or tingling persists, consult a healthcare professional. Safety note: Always perform posture exercises slowly and stop if you feel pain or numbness.
