

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Red risk (Angle: 158.16467546307916°)
- Shoulder Elevation: Green risk (Angle: 3.4036803245544434°)
- Elbow Angle: Red risk (Angle: 130.18951456579921°)
- Wrist Deviation: Red risk (Angle: 179.17142911307909°)
- Pelvic Tilt: Yellow risk (Angle: 14.805450439453125°)

Workstation Analysis

Monitor:

Chair:

Risk Summary

Posture risk: RED (neck flexion, elbow angle, wrist deviation). Workstation risk: RED (monitor and input device setup likely contributing to poor posture).

Exercise Recommendations

Neck retraction: Gently pull your head straight back, keeping your chin tucked, to strengthen neck extensors.

Shoulder blade squeezes: Pinch your shoulder blades together and hold for 5 seconds to improve upper back posture.

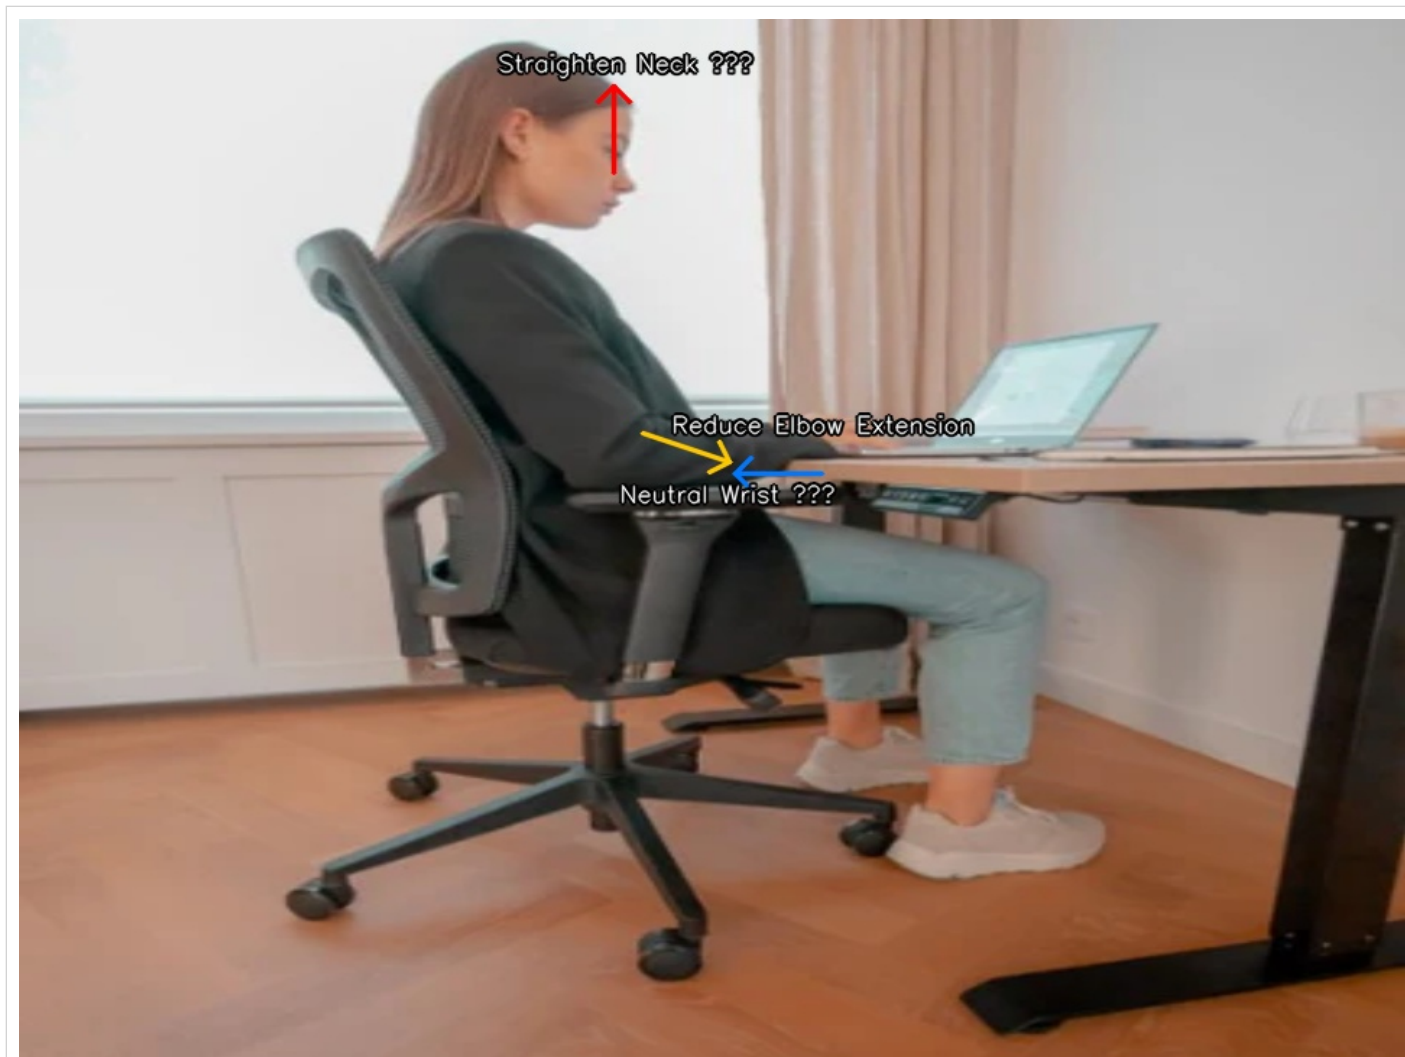

Wrist stretches: Extend one arm with palm up, gently pull back on fingers with the other hand to stretch wrist flexors.

Seated pelvic tilts: Rock your pelvis forward and backward while seated to promote awareness of neutral pelvic position.

Elbow flexor stretch: Extend your arm in front, palm up, and gently pull back on your fingers to stretch the forearm.

Final Advice

Your current posture and workstation setup present significant ergonomic risks, especially for your neck, elbows, and wrists. Immediate adjustments to both posture and workstation are necessary to comply with ISO 9241-5 and reduce the risk of discomfort or injury. Incorporate the recommended exercises and reassess your setup regularly.
