

POSTURA

Ergonomics Evaluation Report

Posture Analysis

- Neck Flexion: Yellow
- Shoulder Elevation: Yellow
- Elbow Angle: Red
- Wrist Deviation: Yellow
- Pelvic Tilt: Red

Workstation Analysis

- Monitor: MonitorHeight: Red
- Monitor: ViewingDistance: Green

Pain & Risk Summary

Average Pain Level: 7

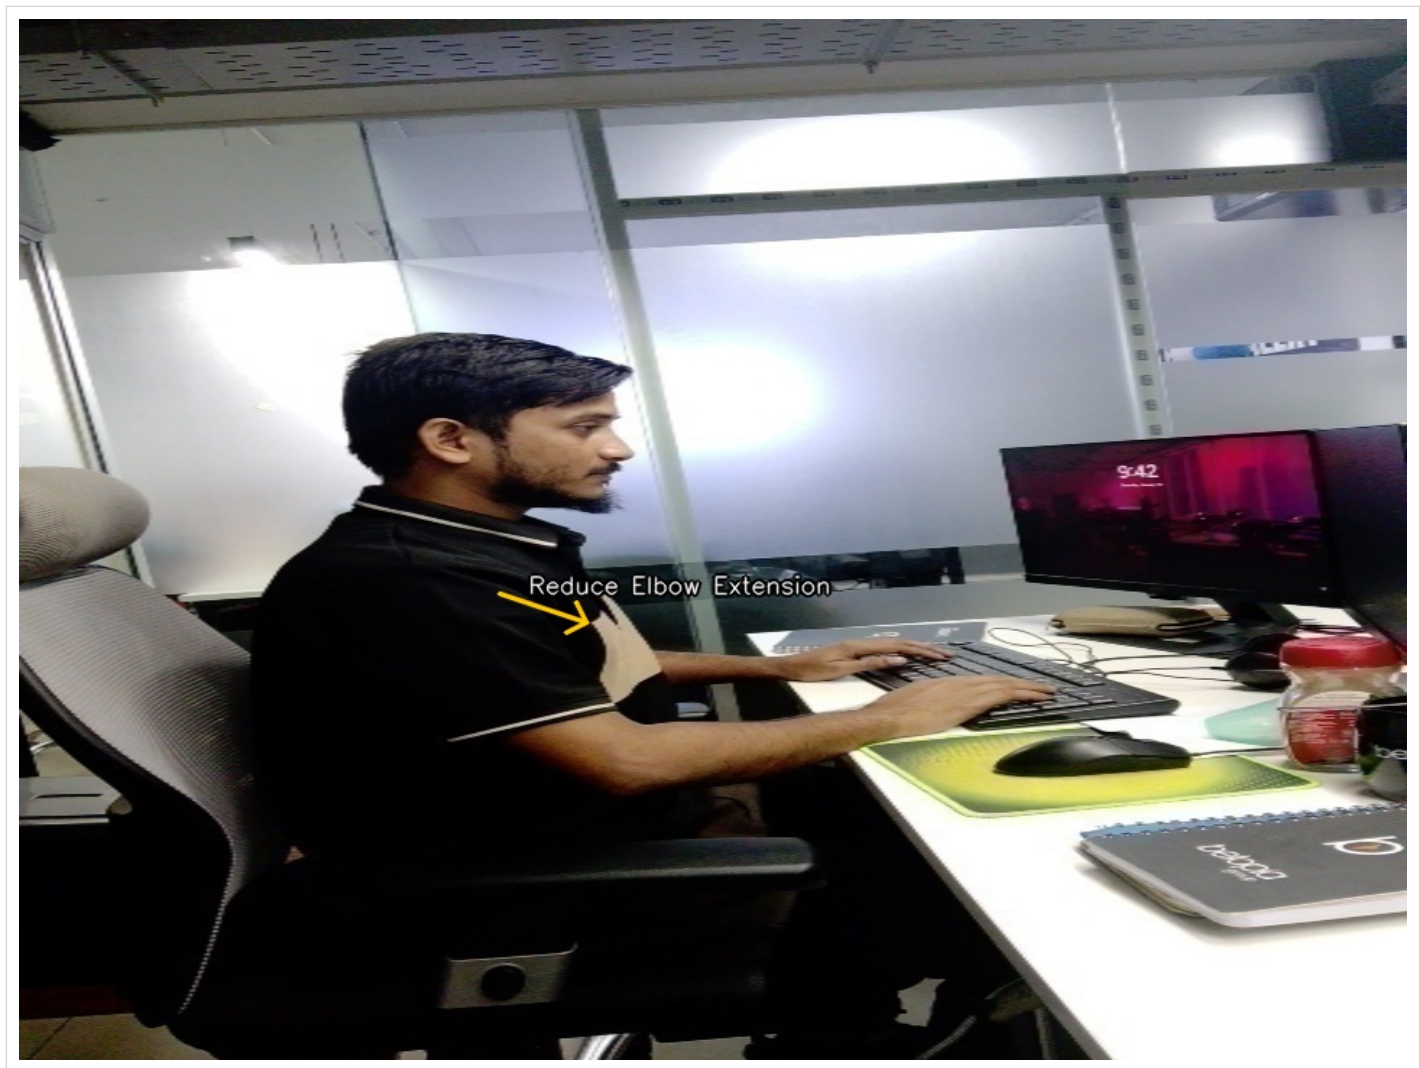

Main Pain Region(s): Neck, Elbows/Forearms, Hips/Glutes (VAS 8)

Posture & Ergonomic Corrections

- Reduce pelvic tilt to under 5°: Sit with hips fully back in the chair, ensuring your pelvis is upright and supported. Adjust your seat pan and backrest to minimize forward tilt, aiming for a neutral pelvic position (less than 5° tilt).
- Lower elbow angle to 100°: Adjust your chair and armrests so your elbows are bent at approximately 100°, with forearms parallel to the desk and shoulders relaxed. Avoid reaching forward or upward.
- Reduce shoulder elevation to under 5°: Relax your shoulders and lower your armrests or desk height so your shoulders are not raised. Keep shoulders level and avoid hunching.
- Raise monitor by 25 cm: Use a monitor riser or stack sturdy books to elevate your monitor so the top of the screen is at or just below eye level, reducing neck flexion and upper back strain.

Final Advice

Your assessment shows significant ergonomic risks, especially for your upper back and lower back due to monitor height, pelvic tilt, and elbow angle. Prioritize raising your monitor, supporting your lower back, and adjusting your chair and armrests. Perform the recommended exercises regularly, and consider the suggested equipment for substantial improvement. If pain persists or worsens, consult a healthcare professional.
